is not surprising therefore that development is now thought of as one of the central challenges of world politics. However its complexities are often overlooked in scholarly analysis and among policy practitioners who tend to adopt a technocratic approach to the crisis of development and violence. This book brings together a wide range of contributions aimed at investigating different aspects of the history of development and violence and its implications for contemporary efforts to consolidate the development security nexus. From environmental concerns through vigilante citizenship to the legacies of armed conflicts during and after decolonization the different chapters reconstruct the contradictory history of development and critically engage contemporary responses and their implications for social and political analyses. In examining violence and insecurity in relation to core organising principles of world politics the contributors engage the problems associated with the nation state and the inter state system and underlying assumptions of the promises of progress. The book offers a range of perspectives on the contradictions of development and on how domination violence and resistance have been conceived. At the same time it exemplifies the relevance of alternative methodological and conceptual approaches to contemporary challenges of development. This book was published as a special issue of *Third World Quarterly* *Tomorrow's Table* Pamela C. Ronald, Raoul W. Adamchak, 2018. *Tomorrow's Table* is for anyone who wishes to know more about how the food they eat is grown. It is for every shopper policy decision maker farmer or anyone who has a tone time or another wondered what labels such as organic or GMO truly mean for the health of the population and the future of our planet. Back cover **Unequal Health** Grace Budrys, 2017-01-23. *Unequal Health* examines the reasons why stark differences in health and well being persist even as the health care industry and access to health care grow. The third edition of this powerful book retains the accessible style and focus on inequality from previous editions while featuring significant new material throughout. After an overview of key themes the book introduces the concept of epidemiology measuring the number of people who are sick or dying and offers an overview of health trends over time. Author Grace Budrys distills the latest research to consider the relevance of sex race income and education and relative social status on health. The book discusses disease habits that contribute to health the relationship between health care and health status genetics socioeconomic inequality health policy and more. The third edition features a new chapter on diet an increased discussion of substance abuse and the attention it receives based on who is engaging in this behavior new material on income and education variables and inequality a new discussion of the Affordable Care Act and its impact and more **Criticality as a signature of healthy neural systems: multi-scale experimental and computational studies** Paolo Massobrio, Lucilla de Arcangelis, Valentina Pasquale, Henrik Jeldtoft Jensen, Dietmar Plenz, 2015-05-08. Since 2003 when spontaneous activity in cortical slices was first found to follow scale free statistical distributions in size and duration increasing experimental evidences and theoretical models have been reported in the literature supporting the emergence of evidence of scale invariance in the cortex. Although strongly debated such results refer to many different in vitro and in vivo preparations awake monkeys anesthetized rats and cats in vitro slices

and dissociated cultures suggesting that power law distributions and scale free correlations are a very general and robust feature of cortical activity that has been conserved across species as specific substrate for information storage transmission and processing Equally important is that the features reminiscent of scale invariance and criticality are observed at scale spanning from the level of interacting arrays of neurons all the way up to correlations across the entire brain Thus if we accept that the brain operates near a critical point little is known about the causes and or consequences of a loss of criticality and its relation with brain diseases e g epilepsy The study of how pathogenetical mechanisms are related to the critical non critical behavior of neuronal networks would likely provide new insights into the cellular and synaptic determinants of the emergence of critical like dynamics and structures in neural systems At the same time the relation between the impaired behavior and the disruption of criticality would help clarify its role in normal brain function The main objective of this Research Topic is to investigate the emergence disruption of the emergent critical like states in healthy impaired neural systems
