Cytokinins as Central Regulators of Plant Growth and Development Jan Hejatko, Wolfram G. Brenner, Klára Hoyerová, G. Eric Schaller, 2022-02-03 **Trafficking of Cardiac Ion Channels** Marcel Verges, 2021-04-27

Protein sorting and trafficking are regulated by well conserved mechanisms. These allow a distinctive set of resident proteins to be present in the correct subcellular organelle which is

required for proper cell functioning Voltage gated ion channels as responsible for cardiomyocyte action potential must be properly localized They participate in cell excitability and electrical coupling ensuring uninterrupted and rhythmic heart beating Ion channel complexes comprise one or more pore forming subunits associated subunits and additional proteins Channel localization and function are regulated by the subunits and associated proteins such as cytoskeletal elements cell adhesion molecules and adaptors These influence protein targeting anchoring and retention in specific surface domains along the cardiomyocyte sarcolemma such as intercalated discs T tubules or the lateral membrane Alterations in ion channel trafficking are the cause of channelopathies associated with inherited arrhythmias leading to sudden death An outstanding question is how these molecular alterations lead to disease In this volume scientists share their vision to understand how cardiac ion channel trafficking is regulated and how it may become altered leading to channelopathies that often turn into deadly arrhythmias Data generated can be translated to a clinical context hopefully turning into approaches to help prevention and treatment which is of utmost importance both medically and socially

Development of Circadian Clock Functions, volume II Daisuke Ono,Takahiro J. Nakamura,Jeff Jones,Jihwan Myung,Rae Silver,2024-07-31 The temporal order of physiological functions such as sleep wakefulness is regulated by the circadian clock This intrinsic clock starts ticking in the embryo and matures during development with attenuation of the clock function in the elderly illustrated by attenuation of synchrony entrainment and outputs of cellular circadian rhythms in the SCN This age related diminution can contribute to the emergence of diseases such as sleep disorders infertility diabetes mental disorders etc Over the course of our lives a variety of internal and external factors are under the influence of the circadian clock This inherent developmental plasticity of the circadian system is critical for the establishment of normal bodily functions to adapt to the changing environment on earth In mammals the central circadian clock is located in the suprachiasmatic nucleus SCN of the hypothalamus Circadian rhythms in the SCN are observed during the embryonic period and input and output pathways from the SCN are formed after birth During postnatal development functions of neurotransmitters in the SCN are changed which have an influence on special temporal patterns of circadian rhythms in the SCN and outputs signals to the outside of the SCN During postnatal development properties of circadian rhythms in the SCN and its inputs and outputs can be modulated by environmental light conditions Recent optical manipulation and imaging techniques have revealed that cell type specific functions for circadian rhythms However it remains unclear which cell types or networks in the brain are modulated during postnatal development and how these cells regulate circadian rhythms depending on postnatal period

Biotrophic Plant-Microbe Interactions Pietro D. Spanu, Ralph Panstruga, 2017-04-20 Throughout their life plants interact with all sorts of microbes Some of these are

detrimental and cause disease some interactions are mutually beneficial for both partners It is clear that most if not all of the interactions are regulated by highly complex checks and balances sustained by signalling and exchange of messengers and nutrients The interactions where both partners are alive for a significant part of their time together are called biotrophic In this e book we bring together 33 articles representing the current state of the art in research about diverse biotrophic plant microbe associations aimed at describing and understanding how these complex and ubiquitous partnerships work and ultimately support much of the land based biosphere
