András Sóbester, Alexander I. J. Forrester, 2014-11-17 Optimal aircraft design is impossible without a parametric representation of the geometry of the airframe We need a mathematical model equipped with a set of controls or design variables which generates different candidate airframe shapes in response to changes in the values of these variables This model's objectives are to be flexible and concise and capable of yielding a wide range of shapes with a minimum number of design variables Moreover the process of converting these variables into aircraft geometries must be robust Alas flexibility conciseness and robustness can seldom be achieved simultaneously Aircraft Aerodynamic Design Geometry and Optimization addresses this problem by navigating the subtle trade offs between the competing objectives of geometry parameterization It begins with the fundamentals of geometry centred aircraft design followed by a review of the building blocks of computational geometries the curve and surface formulations at the heart of aircraft geometry The authors then cover a range of legacy formulations in the build up towards a discussion of the most flexible shape models used in aerodynamic design with a focus on lift generating surfaces The book takes a practical approach and includes MATLAB Python and Rhinoceros code as well as real life example case studies Key features Covers effective geometry parameterization within the context of design optimization Demonstrates how geometry parameterization is an important element of modern aircraft design Includes code and case studies which enable the reader to apply each theoretical concept either as an aid to understanding or as a building block of their own geometry model Accompanied by a website hosting codes Aircraft Aerodynamic Design Geometry and Optimization is a practical guide for researchers and practitioners in the aerospace industry and a reference for graduate and undergraduate students in aircraft design and multidisciplinary design optimization **Resources in Education**, 1985

Adaptive Systems in Control and Signal Processing 1983 I. D. Landau, M. Tomizuka, D. M. Auslander, 2014-06-28 Adaptive Systems in Control and Signal Processing 1983 is a compendium of papers presented at the International Federation of Automatic Control in San Francisco on June 20-22 1983 One paper addresses the results through comparative alternative algorithms in adaptive control of linear time invariant and time varying systems Another paper presents a method in computer simulation of a wide range of stable plants to achieve an alternative approach in designing an adaptive control system The book also compares the stability and the sensitivity approach involving the design of model reference adaptive

systems The authors involved explain that the sensitivity concept determines the dynamic speed of adaptation while the stability concept focuses on finding a linear compensator for any deviant signal One paper proposes an indirect adaptive control algorithm for MIMO square full rank minimum phase systems while another paper discusses the application of the discrete time multivariable adaptive control system to non minimum phase plants with an unknown dead time This book can prove valuable to engineers and researchers of electrical computer and mechanical engineering It can also be helpful for technicians and students dealing with automatic control and telecontrol *Image and Graphics* Yu-Jin Zhang,2015-08-03 This book constitutes the refereed conference proceedings of the 8th International Conference on Image and Graphics ICIG 2015 held in Tianjin China in August 2015 The 164 revised full papers and 6 special issue papers were carefully reviewed and selected from 339 submissions The papers focus on various advances of theory techniques and algorithms in the fields of images and graphics Understanding Earth John Grotzinger,Thomas H. Jordan,2014-04-04 For the introductory geology or physical geology course Understanding Earth offers both majors and non majors rock solid content that originated with the ground breaking text Earth In subsequent editions the text has consistently met the needs of today s students with exceptional content currency interactive learning features and an overall focus of the role of geological science in our lives Understanding Earth doesn t merely present the concepts and processes of physical geology the authors focus on how we know what we know Students actively take part in the scientific process of discovery and learn through experience as they explore the impact of geology on their lives as citizens and future stewards of the planet The new edition incorporates coverage of recent natural disasters the 2011 tsunami fracking and other natural resources issues the latest developments in climate change and key events such as the Mars mission and the arrest of geologists in Italy **What levels of explanation in the behavioural sciences?** Giuseppe Boccignone,Roberto Cordeschi,2015-07-03 Complex systems are to be seen as typically having multiple levels of organization For instance in the behavioural and cognitive sciences there has been a long lasting trend promoted by the seminal work of David Marr putting focus on three distinct levels of analysis the computational level accounting for the What and Why issues the algorithmic and the implementational levels specifying the How problem However the tremendous developments in neuroscience knowledge about processes at different scales of organization together with the complexity of today cognitive theories suggest that there will hardly be only three levels of explanation Instead there will be many different degrees of commitments corresponding to the different granularities from high level behavioural models to low level neural and molecular models of the cognitive research program For instance Bayesian approaches that are usually advocated for formalizing Marr s computational level and rational behaviour have even been adopted to model synaptic plasticity and axon guidance by molecular gradients As a result we can consider the behavioural scientist as dealing with models at a multiplicity of levels The purpose of this Research Topic in Frontiers in Theoretical and Philosophical Psychology is to promote an approach to the role of the levels and explanation and models which is of interest

for cognitive scientists neuroscientists psychologists behavioural scientists and philosophers of science **Virtual, Augmented and Mixed Reality: Designing and Developing Augmented and Virtual Environments** Randall Shumaker, Lackey Stephanie, 2014-06-06 The two volume set LNCS 8525 8526 constitutes the refereed proceedings of the 6th International Conference on Virtual Augmented and Mixed Reality VAMR 2014 held as part of the 16th International Conference on Human Computer Interaction HCI 2014 in Heraklion Crete Greece in June 2014 jointly with 13 other thematically similar conferences The total of 1476 papers and 220 posters presented at the HCII 2014 conferences were carefully reviewed and selected from 4766 submissions These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems The papers thoroughly cover the entire field of human computer interaction addressing major advances in knowledge and effective use of computers in a variety of application areas The total of 82 contributions included in the VAMR proceedings were carefully reviewed and selected for inclusion in this two volume set The 39 papers included in this volume are organized in the following topical sections interaction devices displays and techniques in VAMR designing virtual and augmented environments avatars and virtual characters developing virtual and augmented environments Cardiovascular Mechanobiology, 2nd edition Markus Hecker, Dirk J Duncker, 2023-07-18 Biomechanical forces play a major role in organ development shape and function When exceeding the physiological range however they may become detrimental for organ structure and function This is probably best exemplified by the cardiovascular system with both the heart and blood vessels being continuously exposed to the biomechanical forces exerted by the flow of blood In the heart it is the build up of pressure inside the ventricles that allows the ejection of blood into the pulmonary and systemic circulation The luminal diameter of the small arteries in both parts of the circulation determines the resistance to flow Hence it also determines the level of blood pressure in both the pulmonary and systemic circulation and thus the afterload for both ventricles of the heart A narrowing of the small arteries e g due to an increase in tone therefore leads to an increase in blood pressure in the affected part of the circulation This will decrease organ perfusion but increase the afterload for the corresponding ventricle of the heart Consequently the affected ventricle must build up more pressure to maintain cardiac output However if the rise in blood pressure pulmonary or arterial hypertension persists the increase in wall tension can no longer be compensated by active constriction thereby forcing the ventricle to resort to other means to unload itself Typically this is achieved by structural alterations in its wall which becomes thicker hypertrophy and stiffer remodelling of the extracellular matrix Ultimately this maladaptive response may lead to dysfunction and eventually failure of the ventricle which would only be able to eject a significantly smaller amount of blood into circulation The increase in wall tension has resulted in an increased stretching of the cardiomyocytes as well as non cardiomyocytes such as cardiac fibroblasts which in turn alters both their phenotype and their environment Research into the mechanobiology of the heart aims to unravel the molecular and cellular mechanisms underlying the physiological response of

the heart to load to learn what goes wrong when the heart is faced with sustained pressure overload This may pave the way to therapeutically interfering with this maladaptive response and thus preventing either the initial hypertrophy or its transition into heart failure While the heart is mainly subjected to pressure hence stretch as a biomechanical force the mechanobiology of vascular cells is somewhat more complex Endothelial cells lining the luminal surface of each blood vessel are continuously subjected to the viscous drag of flowing blood referred to as fluid shear stress Fluid shear stress mainly affects the endothelial cells of the small arteries and arterioles maintaining them in a dormant phenotype If blood flow is disturbed e g at arterial bifurcations or curvatures fluid shear stress declines and may give rise to a shift in phenotype of the endothelial cells A shift from anti inflammatory to pro inflammatory in combination with the reduced flow at these sites may enable leukocyte recruitment and diapedesis which results in a pro inflammatory response in the vessel wall Endothelial cells and in particular vascular smooth muscle cells are subjected to another biomechanical force the blood pressure Volume dependent distention of the vessel wall which can be achieved through an increase in blood flow results in an increase in wall tension thereby stretching of the endothelial and smooth muscle cells Like the cardiomyocytes of the heart the vascular smooth muscle cells of the small arteries and arterioles try to normalise wall tension by active constriction which cannot be maintained for long These cells subsequently undergo hypertrophy or hyperplasia depending on the size of the blood vessel and remodel the extracellular matrix so that the vessel wall also becomes thicker and stiffer This in turn raises their resistance to flow and may contribute to the increase in blood pressure in either the pulmonary or systemic circulation Research into the mechanobiology of the blood vessels aims to unravel the molecular and cellular mechanisms underlying the physiological response of the vascular cells to pressure wall tension and flow shear stress It also aims to uncover what goes wrong e g in arteriosclerosis or hypertension and to eventually specifically interfere with these maladaptive remodelling processes The aforementioned aspects of cardiovascular mechanobiology along with many more facets of this fascinating timely and highly clinically relevant field of research are addressed by the original research and review articles within this Research Topic
