Handbook of Formulating Dermal Applications Nava Dayan, 2016-12-07 The conceptualization and formulation of skin care products intended for topical use is a multifaceted and evolving area of science. Formulators must account for myriad skin types, emerging opportunities for product development as well as a very temperamental retail market. Originally published as *Apply Topically* in 2013, now out of print, this reissued detailed and comprehensive handbook offers a practical approach to the formulation chemist's day-to-day endeavors by addressing the innumerable challenges facing the chemist both in design and at the bench, such as formulating with specific properties, formulation processing and production techniques, sensory and elegance, stability and preservation, color cosmetics, sunscreens. Offering valuable guidance to troubleshooting issues regarding ingredient selection and interaction, regulatory concerns that must be addressed early in development and the extrapolation of preservative systems, fragrances, stability and texture aids. Exploring the advantages and limitations of raw materials, addressing scale up and pilot production process and concerns, testing and measurements. Methods. The 22 chapters written by industry experts such as Roger L. McMullen, Paul Thau, Hemi Nae, Ada Polla, Howard Epstein, Joseph Albanese, Mark Chandler, Steve Herman, Gary Kelm, Patricia Aikens, and Sam Shefer, along with many others, give the reader and user the ultimate handbook on topical product development.

Handbook of Air Toxics Lawrence H. Keith, Mary Walker, 2020-09-10 The *Handbook of Air Toxics* compiles, defines, and clarifies several methods and concepts of airborne toxic substances found in the environment. This comprehensive reference helps regulators, consultants, and other environmental professionals meet the challenges of sampling and analysis, emissions reductions, and health and safety issues related to human exposure. It is an important reference addressing the ongoing concern about the consequences of air pollution and the implementation and modification of the Environmental Protection Agency's EPA Clean Air Act. Some of the methods described in the *Handbook of Air Toxics* include fluorescence, thermal desorption, selected ion monitoring, ion chromatography, light microscopy, specific electrode analysis, titration, colorimetry, atomic absorption, and spectrophotometry. It also covers the use of isokinetic sampling trains, midge impingers, carbon molecular sieves, and sampling canisters in the analysis of air toxics. The *Handbook* also contains recommendations from the EPA for analytical methods for those air toxics where methods do not already exist and provides advance information on future method development by the EPA.
