Green Asia Tania Lewis, 2016-09-13 Economic development in Asia is associated with expanding urbanism, overconsumption and a steep growth in living standards. At the same time, rapid urbanisation, changing class consciousness and a new rural-urban divide in the region have led to fundamental shifts in the way ecological concerns are articulated politically and culturally. Moreover, these changes are often viewed through a Western moralistic lens which at the same time applauds Asia's economic growth as the welcome revival of a floundering world economy and simultaneously condemns this growth as encouraging hyperconsumerism and a rupture with more natural ways of living. This book presents an analysis of a range of practices and activities from across Asia that demonstrate that people in Asia are alert to ecological concerns, that they are taking action to implement new styles of green living and that Asia offers interesting alternatives to narrow Anglo-American models of sustainable living. Subjects explored include eco-tourism in the Philippines, green co-operatives in Korea, the importance of tradition within Asian discourses of sustainability and much more.

Science of Food Nutrition and Health Vinod Puri, 2023-07-21 Diet is one of the important facets of a comprehensive approach to good health along with physical, social, emotional and intellectual well-being. During the second half of the 20th century we witnessed a dramatic change in our eating patterns and lifestyle aided by agricultural and industrial revolution, globalisation and urbanisation and emergence of associated diet-related chronic diseases such as obesity, coronary heart disease, hypertension,

diabetes some type of cancer stroke and degenerative arthritis The science of food and nutrition is very complex Nutrition science like many other fields of science is evolutionary and there are always conflicting research outcomes that need to be carefully evaluated We ingest hundreds of dietary components every day and understanding various metabolic pathways and the effect of interactions of various dietary components in vivo is rather challenging Recent advances in genetic research fostered the emergence of new disciplines such as nutrigenomics proteomics metabolomics and transcriptomics which can shed light on the molecular level interaction between dietary nutrients and the genome These technologies provide the vision for future nutrition research that may unravel how the diet genome interactions modifies the phenotype Food may not be the overall cure for the treatment of every possible disease but the importance of food in both causing and relieving certain problems cannot be neglected This is one of the most researched topics and there is a lot written about it However this book is probably the only text that provides up to date information on the various interrelated topics on food and nutrition that would be of interest to wider community

The Japanese LGBTQ+ Community in the World Masami Tamagawa, 2022-12-30 This study of the Japanese LGBTQ community sheds light on the intersectionality of lived experiences including gender sexuality family mental health race and ethnicity migration and nationality offering a picture of a community whose experience is deeply embedded in the dynamic society around The Japanese LGBTQ Community in the World takes an innovative approach viewing the community as an integral part of the world in flux rather than an isolated monoracial and monolingual tight knit entity Like the US and many other countries in the world when the pandemic struck Japan its citizens were not all equally equipped to withstand it Due particularly to lingering systemic injustices including stigma ostracism from family and society as well as lack of legal protection of their basic human rights the pandemic has disproportionately affected the lives of LGBTQ individuals and couples in Japan They face unique challenges within various facets of their lives Their experiences are an integral part of understanding how this pandemic is affecting a societal response to an already marginalized group of individuals This important study looks at the issues from a range of perspectives including public health care services the media and cross cultural experience This book is ideal for students and scholars of gender studies LGBTQ studies sociology health and Asian studies
