Leap Assessment Guide 2015:

Achieving sustainable production of milk Volume 2 Dr Nico van Belzen, 2017-06-06 Summarises current research on pathogenic risks affecting milk and ways they can be controlled on the farm Reviews ways of measuring and reducing the environmental impact of dairy farming such as better grassland management Assesses the wider role of dairy farming and how it can be improved in the developing world *Environmental performance of pig supply chains: Guidelines for assessment (Version 1)* Food and Agriculture Organization of the United Nations, 2018-02-23 This is a living document produced by the Livestock Environmental and Assessment Performance LEAP Partnership The document presents a methodology and provides guidance for the assessment of the environmental performance of pig supply chains It provides users guidance on how to apply the life cycle assessment approach to pig supply chains Demand for livestock products is projected to grow 1.3 percent per year until 2050 driven by global population growth and increasing wealth and urbanization This projected growth places significant pressure on the livestock sector to perform in a more sustainable way Currently many different methods are used to assess the environmental impacts and performance of livestock products This causes confusion and makes it difficult to compare results and set priorities for continuing improvement The intention of this document is to provide an overview assessment of existing studies and associated methods that have used life cycle assessment for the evaluation of pig supply chains *Instant Insights: Improving the sustainability of dairy production* Various authors, Sophie Bertrand, Dr J. Upton, E. Murphy, Dr Laurence Shalloo, M. Murphy, I. J. M. De Boer, Professor Peter Groot Koerkamp, Dr Stephanie A. Terry, Dr Carlos M. Romero, Dr Alex V. Chaves, Dr Tim McAllister, Dr Elie Jami, Dr Itzhak Mizrahi, Dr Jack B. Hetherington, Dr Pablo Juliano, Dr Rodolfo Garcia-Flores, 2024-09-24 Reviews the range of methods available to evaluate the environmental impact of dairy production Considers the role of the ruminant microbiome on energy harvest and methane emission Addresses how dairy farms can function more sustainably focussing on how energy consumption and water use can be optimised to reduce environmental impact Biodiversity and the livestock sector - Guidelines for quantitative assessment Food and Agriculture Organization of the United Nations, 2020-06-01 The Technical Advisory Group TAG on biodiversity hereafter called Biodiversity TAG is composed of 25 international experts in ecology biodiversity indicators agronomy life cycle assessment livestock production systems and environmental science Their backgrounds complementary between systems and regions allowed them to understand and address different perspectives The aim of the methodology developed in these guidelines is to introduce a harmonized international approach for assessing the impacts of livestock on biodiversity The livestock sector is a major user of natural resources land in particular and an important contributor to pollution e.g. causing nutrient losses increasing greenhouse gas emissions which makes it one of the sectors with the highest impact on biodiversity At the same time livestock production is one of the few sectors with not only negative but also positive impacts on biodiversity therefore the sector can pull two levers to improve its biodiversity

performance mitigate harm and maximize benefits Many environmental assessments of the livestock sector have not addressed biodiversity because of its intrinsic complexity These guidelines strive to include biodiversity in environmental assessments in order to increase the understanding of the impacts of livestock on biodiversity and to reveal possible synergies or trade offs with other environmental criteria or Sustainable Development Goals SDGs Several indicators in these guidelines are also of relevance for the UN Decade on Ecosystem Restoration

Principles for the assessment of livestock impacts on biodiversity Food and Agriculture Organization of the United Nations,2018-06-08 The provision of guidance for the quantitative assessment of biodiversity in live stock and other sectors is an emerging area of work This document represents an initial step in which international experts with various backgrounds shared their views on biodiversity assessment The general objective of this document was to develop principles applicable to different assessment methods in order to guarantee a minimum level of soundness transparency scientific relevance and completeness These principles can be used to identify crucial elements of livestock systems that affect biodiversity to monitor changes and make improvements and to produce assessment results for internal or external communication

Water use in livestock production systems and supply chains. Guidelines for assessment Food and Agriculture Organization of the United Nations,2019-08-14 The Technical Advisory Group TAG for Water Use Assessment composed by 30 international experts has developed guidelines on water footprinting for livestock supply chains The mandate of the Water TAG was to provide recommendations to monitor the environmental performance of feed and livestock supply chains over time so that progress towards improvement targets can be measured apply the guidelines for feed and water demand of small ruminants poultry large ruminants and pig supply chains build on and go beyond the existing FAO LEAP guidelines and pursue alignment with relevant International Organization for Standardization ISO standards specifically ISO 14040 ISO 14044 ISO 2006b and 2006a and ISO 14046 ISO 2014 The guidelines on water use assessment include the impact assessment the assessment of the environmental performance related to water use of a livestock related system by assessing potential environmental impacts of blue water consumption following the water scarcity footprint according to the framework provided by ISO 14046 ISO 2014 and the assessment of the system s productivity of green and blue water The guidelines are thus intended to support the optimization of use of water resources and the identification of opportunities to decrease the potential impacts of water use in livestock production The Water TAG guidance is relevant for livestock production systems including feed production from croplands and grasslands and production and processing of livestock products cradle to gate It addresses all livestock production systems and livestock species considered in existing LEAP animal guidelines poultry pig small ruminant and large ruminant supply chains

Environmental performance of feed additives in livestock supply chains. Guidelines for assessment Food and Agriculture Organization of the United Nations ,2020-09-01 The production and the use of feed additives influence the environmental impact of livestock production The use of feed additives significantly acts

on feed efficiency and thus animal and environmental performance The methodology developed in these guidelines aims to introduce a harmonized international approach to the assessment of the environmental performance of feed additives in livestock supply chains taking into consideration the impact of their production and use all along the supply chain for large ruminants pigs and poultry The objective of this technical document is twofold on the one hand to provide detailed guidance on how to measure the environmental performance of the production of feed additives and on the other hand how to measure the effects of feed additives on the environmental performance of livestock products The guidelines on the environmental performance of feed additives in livestock supply chains are intended to be used with other published LEAP guidelines

Nutrient Flows and associated environmental impacts in livestock supply chains. Guidelines for assessment Food and Agriculture Organization of the United Nations, 2018-09-27 The aim of the methodology developed in these guidelines is to introduce a harmonized international approach assessing nutrient flows and impact assessment for eutrophication and acidification for livestock supply chains taking the specificity of the various production systems involved into consideration The methodology strives to increase understanding of nutrient use efficiency and associated environmental impacts and to facilitate the improvement of livestock systems environmental performance The guidelines are a product of the Livestock Environmental Assessment and Performance LEAP Partnership a

multi stakeholder initiative whose goal is to improve the environmental sustainability of livestock sector through better metrics and data Nutrient use in livestock production systems increased over the last decades due to the increased demand for livestock production This demand is mainly driven by the increase in the population growth population income and urbanization Consequently in livestock supply chains nutrient losses into the environment have contributed to environmental burdens such as climate change air and water pollution degradation of soil quality loss of biodiversity and human health issues Therefore there is strong interest in measuring nutrient flows to improve the environmental performance of the livestock sector The objectives of these guidelines are To develop a harmonized science based approach resting on a consensus among the sector s stakeholders To recommend a scientific but at the same time practical an approach that builds on existing or developing methodologies To promote a harmonised approach to assess nutrient flows and impact assessment relevant for global livestock supply chains To identify the principal areas where ambiguity or differing views exist concerning the methodological framework During the development process these guidelines were submitted for technical review and public review The purpose is to strengthen the advice provided and ensure it meets the needs of those seeking to improve nutrient use efficiency and environmental performance through sound assessment practice This document is not intended to remain static It will be updated and improved as the sector evolves and more stakeholders become involved in the LEAP and as new methodological frameworks and data become available The guidelines developed by the LEAP Partnership gain strength because they represent a multi actor coordinated cross sectoral and international effort to harmonize assessment approaches Ideally the harmonization leads to greater understanding transparent application and communication of metrics and not least real and measurable improvement in environmental performance

Farm-Level Modelling Shailesh Shrestha, Andrew Barnes, Bouda Vosough Ahmadi, 2016-09-28 Agriculture is the product of a complex mixture of behavioural biophysical and market drivers Understanding how these factors interact to produce crops and livestock for food has been the focus of economic investigation for many years The advent of optimisation algorithms and the exponential growth in computing technology has allowed significant growth in mathematical modelling of the dynamics of agricultural systems The complexity of approaches has grown in parallel with the availability of data at increasingly finer resolutions Farm level models have been widely used in agricultural economic studies to understand how farmers and land owners respond to market and policy levers This book provides an in depth description of different methodologies and techniques currently used in farm level modelling While giving an overview of the theoretical grounding behind the models an applied approach is also used Case studies range from the application of modelling to policy reforms and the subsequent impacts on rural communities and food supply This book also provides descriptions of the use of farm level models in much wider fields such as aggregation and linking with sectoral models Its purpose is to show the reader the methods that have been employed to inform decision makers about how to improve the economic social and environmental goals required to achieve the aims of multidimensional policy
