

A close-up photograph of a robotic fish, which is a small, green, elongated device with a white, segmented body, swimming in a dark, shallow tank. The fish is surrounded by numerous small, white, irregularly shaped particles, which are microplastics. The fish's mouth is open, and it appears to be consuming these particles. The background is dark, and the lighting is focused on the fish and the particles.

Times *Cybermedia* Carol Vernallis, Holly Rogers, Jonathan Leal, Selmin Kara, 2021-10-21 We are experiencing a time when digital technologies and advances in artificial intelligence, robotics and big data are redefining what it means to be human. How do these advancements affect contemporary media and music? This collection traces how media with a focus on sound and image engages with these new technologies. It bridges the gap between science and the humanities by pairing humanists' close readings of contemporary media with scientists' discussions of the science and math that inform them. This text includes contributions by established and emerging scholars performing across the aisle research on new technologies exploring topics such as facial and gait recognition, EEG and audiovisual materials, surveillance and sound and images in relation to questions of sexual identity, race, ethnicity, disability and class and includes examples from a range of films and TV shows including *Blade Runner*, *Black Mirror*, *Mr. Robot*, *Morgan*, *Ex Machina* and *Westworld*. Through a variety of critical, theoretical, proprioceptive and speculative lenses, the collection facilitates interdisciplinary thinking and collaboration and provides readers with ways of responding to these new technologies.

Artificial Life VI Christoph Adami, 1998 Since their inception in 1987, the Artificial Life meetings have grown from small workshops to truly international conferences reflecting the fields' increasing appeal to researchers in all areas of science.

Letters to the Cyborgs Judyth Baker, 2016-06-30 *Letters to the Cyborgs* describes a frightening future about to land on our doorsteps based on inventions, science and technology we have today. Each story details the political, social and environmental destruction of our world as Artificial Intelligence takes over the planet. With intelligence, insight and humor, Baker examines what it means to be human in a world where Cyborgs and robots rule. Ranging from chilling visions of Armageddon to haunting stories of the power of human love with some comic relief thrown in to make the truth easier to handle, this groundbreaking collection of short stories faces the questions scientists, politicians and corporations are ignoring when Artificial Intelligence becomes self-aware and is a thousand times more intelligent than any human being. What happens next? Scientists tell us that this Singularity will occur by 2030. What is human will become the most important question in history as humans become 51% or more machine.
