Lecture Math Guide For Class 9:

Lectures on Tensor Categories and Modular Functors Bojko Bakalov, Alexander A. Kirillov, 2001 This book gives an exposition of the relations among the following three topics monoidal tensor categories such as a category of representations of a quantum group 3 dimensional topological quantum field theory and 2 dimensional modular functors which naturally arise in 2 dimensional conformal field theory The following examples are discussed in detail the category of representations of a quantum group at a root of unity and the Wess Zumino Witten modular functor The idea that these topics are related first appeared in the physics literature in the study of quantum field theory Pioneering works of Witten and Moore Seiberg triggered an avalanche of papers both physical and mathematical exploring various aspects of these relations Upon preparing to lecture on the topic at MIT however the authors discovered that the existing literature was difficult and that there were gaps to fill The text is wholly expository and finely succinct It gathers results fills existing gaps and simplifies some proofs The book makes an important addition to the existing literature on the topic It would be suitable as a course text at the advanced graduate level *Resources in Education* ,1999-04 Lectures on Optimal Transport Luigi Ambrosio, Elia Brué, Daniele Semola, 2021-07-22 This textbook is addressed to PhD or senior undergraduate students in mathematics with interests in analysis calculus of variations probability and optimal transport It originated from the teaching experience of the first author in the Scuola Normale Superiore where a course on optimal transport and its applications has been given many times during the last 20 years The topics and the tools were chosen at a sufficiently general and advanced level so that the student or scholar interested in a more specific theme would gain from the book the necessary background to explore it After a large and detailed introduction to classical theory more specific attention is devoted to applications to geometric and functional inequalities and to partial differential equations A Panorama of Pure Mathematics, As Seen by N.
