

LEED Quick Reference Guide for Operable Partitions

Operable partitions can contribute to or comply with various LEED credit categories. The specific categories will vary due to the customizable nature of operable partitions.

Credit categories that apply to operable partitions are:

MR Credit 1.3 Building Reuse

MR Credit 3.1/3.2 Material Reuse

MR Credit 4.1/4.2 Recycled Content

MR Credit 5.1/5.2 Regional Materials

MR Credit 7 Certified Wood

EQ Credit 4.1 Low Emitting Materials

EQ Credit 4.2 Low Emitting Materials

EQ credit 4.4 Low Emitting Materials

Alternative materials such as insulation allow products to contribute to additional LEED credit categories like "Rapidly Renewable" materials. The highly customizable operable partitions, like Modernfold's product offering, allow for the integration of customer specified green materials. The exact contributions will depend on what subcomponents are specified.

MR Credit 1.3 Building Reuse- Modernfold wall systems and ceiling track systems can contribute to this category as credit is achieved by reusing interior elements such as existing wall systems.

MR Credit 3.1/3.2 Material Reuse- Modernfold wall systems, while technically can be reused in a new location and contribute to this category, generally will not be because of the dimensional requirements. The ceiling track system, however, technically can be removed and used elsewhere to contribute to this category.

MR Credit 4.1/4.2 Recycled Content- All Modernfold products contain recycled content. The percentages of post-consumer and post-industrial recycled content are dependent on the specific details of the order.

MR Credit 5.1/5.2 Regional Materials- All Modernfold products are manufactured in Dyersville, Iowa. If the job site is within 500 miles of our manufacturing facility, then our product will contribute to this credit category.

MR Credit 7 Certified Wood- This credit category is only applicable when using wood veneer covering. Modernfold does have specific wood veneer products that are FSC certified and contribute to this category. These are subject to availability, lead time and price.

EQ Credit 4.1 Low Emitting Materials- Adhesives and Sealants- Modernfold complies with this credit category as we do not use any adhesives or sealants on site.

EQ Credit 4.2 Low Emitting Materials- Paints and Coatings- Modernfold wall systems do not require any paint or coating to be applied on site.

EQ credit 4.4 Low Emitting Materials- Composite Wood and Agrifiber Products- This is only applicable when ordering MDF skin panels. Modernfold can supply formaldehyde-free MDF upon request to comply with this credit category. These are subject to availability, lead time and price.

Modernfold is a member of the USGBC.

Modernfold supplies job specific LEED submittals upon request.

Modernfold products have green friendly components as a standard.

Modernfold customizes products to integrate desired green components.

analyses and principles used by designers of energy efficient buildings and addresses all essential elements of the discipline. An essential guide for students studying civil architectural mechanical and electrical engineering with a focus on energy building systems and building science the book provides practical in class materials examples and actual design practices as well as end of chapter questions with solutions and sample group projects. Readers will find a thorough introduction to the cross disciplinary approach to the design of energy efficient buildings. Comprehensive explorations of all critical elements of energy efficient building design including standards and codes psychometrics microclimate thermal comfort indoor air quality HVAC systems and more. In depth discussions of the foundational knowledge calculations analysis and principles needed to design energy efficient buildings. Practical in class examples and end of chapter questions with solutions for students and design guidance and sample group projects for use in course lectures and actual design practices. Perfect for graduate and advanced undergraduate students studying building environmental systems building systems in construction and mechanical and electrical systems in construction. Energy Efficient Buildings Fundamentals of Building Science and Thermal Systems will also earn a place in the libraries of practicing civil architectural and mechanical engineers. **PPI NCIDQ Interior Design Reference Manual, Seventh Edition eText - 1 Year** David Kent Ballast, 2021-06-18

Stratum Ventilation—Advanced Air Distribution for Low-Carbon and Healthy Buildings Sheng Zhang, Yong Cheng, Zhang Lin, 2024-11-01. This book investigates the creation of healthy and thermally comfortable built environments in a low carbon manner with advanced air distribution i.e. stratum ventilation. Stratum ventilation efficiently supplies conditioned and clean air to the head level of occupants for thermal comfort and inhaled air quality and largely reduces energy consumption and CO2 emission e.g. by 44% and 32% respectively compared with the conventional air distribution method. This book provides the working principles performance evaluations methods design methods operation

methods and different application scenarios particularly highlighting airborne infection risk control of respiratory diseases and integrated application with renewable energy of stratum ventilation to provide theoretical understandings and technical guidelines of stratum ventilation The book is intended for undergraduate and graduate students researchers and engineers who are interested in cutting edge technologies of livable and sustainable built environments Sustainable Architectural Design Kuppaswamy Iyengar,2015-05-15 This book is a guide to a sustainable design process that moves from theory to site and energy use to building systems and finally to evaluation and case studies so you can integrate design and technology for effective sustainable building Kuppaswamy Iyengar shows you how to get it right the first time use free energy systems and utilise technologies that minimize fossil fuel use Each chapter has a sustainable design overview technical details and strategies marked by clear sections a summary and further resources Heavily illustrated with charts tables drawings photographs and case studies the book shows technologies and concepts integrated into cohesive project types from small and large office spaces to single and multiuse residences hospitals schools restaurants and warehouses to demonstrate implementing your designs to meet clients needs now and for the future Includes an overview of alternate assessment and evaluation systems such as BREEAM CASBEE GBTool Green Globes alongside LEED ECOTECT energy 10 HEED and eQuest simulation programs The guide reveals the importance of the building envelope walls superstructure insulation windows floors roofs and building materials on the environmental impact of a building and has a section on site systems examining site selection landscape design thermal impact and building placement Becoming a Green Building Professional Holley Henderson,2012-08-03 A career guide for professionals in sustainable architecture design planning development and related consulting For those considering a new career or a career change focused on green and sustainable building and design Becoming a Green Building Professional offers practical information on educational requirements career options guidance and tips and first hand interviews with green building professionals Perfect for underemployed architects and other building and design professionals who want to reinvent and renew their careers as well as students considering such a career this is a vital and informative guide to a growing field **Understanding Green Building Guidelines: For Students and Young Professionals** Traci Rose Rider,2010-02-17 Summarizes the main issues and strategies of the forceful and fast paced green building movement Many professions are increasingly producing tools to assist clients in breaking down and understanding the different elements that reside under the umbrella of the sustainability movement For the design and construction professions this unpacking often takes the form of green building guidelines and rating systems This book aims to look at a selection of both national and local green building rating systems and guidelines ranging from commercial to residential While the goal is to provide students and young professionals with a solid overview of each product enabling them to understand the differences and select the most appropriate system for their chosen projects the book provides valuable overviews and comparisons for anyone interested in better buildings designers homeowners realtors contractors facility
