Targeted Biomarker Quantitation by LC-MS Naidong Weng,Wenying Jian,2017-07-31 The first book to offer a blueprint for overcoming the challenges to successfully quantifying biomarkers in living organisms The demand among scientists and clinicians for targeted quantitation experiments has experienced explosive growth in recent years While there are a few books dedicated to bioanalysis and biomarkers in general until now there were none devoted exclusively to addressing critical issues surrounding this area of intense research Target Biomarker Quantitation by LC MS provides a detailed blueprint for quantifying biomarkers in biological systems It uses numerous real world cases to exemplify key concepts all of which were carefully selected and presented so as to allow the concepts they embody to be easily expanded to future applications including new biomarker development Target Biomarker Quantitation by LC MS primarily focuses on the assay establishment for biomarker quantitation a critical issue rarely treated in depth It offers comprehensive coverage of three core areas of biomarker assay establishment the relationship between the measured biomarkers and their intended usage contemporary regulatory requirements for biomarker assays a thorough understanding of which is essential to producing a successful and defensible submission and the technical challenges of analyzing biomarkers produced inside a living organism or cell Covers the theory of and applications for state of the art mass spectrometry and chromatography and their applications in biomarker analysis Features real life examples illustrating the challenges involved in target biomarker quantitation and the innovative approaches which have been used to overcome those

challenges Addresses potential obstacles to obtain effective biomarker level and data interpretation such as specificity establishment and sample collection Outlines a tiered approach and fit for purpose assay protocol for target biomarker quantitation Highlights the current state of the biomarker regulatory environment and protocol standards Target Biomarker Quantitation by LC MS is a valuable resource for bioanalytical scientists drug metabolism and pharmacokinetics scientists clinical scientists analytical chemists and others for whom biomarker quantitation is an important tool of the trade It also functions as an excellent text for graduate courses in pharmaceutical biochemistry and chemistry

Gaur, Pradeep Sharma, 2013-12-02 Plant stresses are serious threats to the sustainability of crop yields accounting for more crop productivity losses than any other factor in rainfed agriculture Post harvest losses mean surplus crops do not reach market affecting the livelihoods of farming families and too often these families are left with no other option than to eat contaminated stored food These constraints impact the food security of these farming families as well as the communities and countries in which they live This book is the demonstration of a clear synergistic effect of stresses an effect that was unexpectedly as important as either stress applied alone This book will add to our current knowledge of abiotic stress response in plants and will provide the groundwork necessary to build future strategies for crop enhancement The fundamental principles that underpin all biotechnology are explained and a full range of examples discussed to show how these principles are applied from starting substrate to final product It will be beneficial to both plant breeders and molecular biologists because it combines the topics of physiology tolerance genes and breeding methods When these topics are presented together it is easy to compare all aspects of tolerance mechanisms and breeding methods for abiotic stresses These comparisons are useful to understand which pathways or which genes are important for rendering more tolerance to a certain abiotic stress and to bring forward new ideas for improving the tolerance Features Cover both plant biotic and abiotic stresses Important factors in managing crops for water stress conditions Substantially increase the sustainable productivity of smallholder farmers in developing countries Genetic and biochemical approaches if those approaches constitute a substantial improvement on current practices
