Process Chains (E-Book) Gunter Spöcker,2016-11-07 The manufacturing industry is undergoing major changes due to current trends like mass customization and Industrie 4.0 However today's CAx systems and approaches are not suitable to handle adaptive CAx process chains To overcome this situation and to close the gaps between the existing CAx environment and the requirements for the manufacturing of the future a modular approach based on extended function blocks is presented The proposed approach is verified based on the use case of a worn out BLIR segment by using repair features

Machine Tools Production Systems 3 Christian Brecher,Manfred Weck,2021-12-13 The first part of this third volume focuses on the design of mechatronic components in particular the feed drives of machine tools used to generate highly dynamic drive movements Engineering guides for the selection and design of important machine components the control technology of feed drives and the measuring systems required for position capture are presented Another focus is on process and diagnostic equipment for manufacturing machines and systems The second part describes control concepts including programming methods for various applications of modern production systems Programmable logic controllers PLC numerical controllers NC and robot controllers RC are part of these presentations In the context of automated manufacturing systems the various levels of the automation pyramid and the importance of control systems are also outlined Finally the volume deals with the engineering of machines and plants The German Machine Tools and Production Systems Compendium has been completely revised The previous five volume series has been condensed into three volumes in the new ninth edition with colored technical illustrations throughout This first English edition is a translation of the German ninth edition

Production at the Leading Edge of Technology Welf-Guntram Drossel,Steffen Ihlenfeldt,Martin Dix,2025-08-22 This book contains all contributions to the congress in which both detailed scientific investigations and technological innovations in the process chains of machining and forming are discussed as well as comprehensive far sighted overall views on the planning and control of production processes These approaches are supplemented by more interdisciplinary cross sectional topics such as robotics control engineering automation materials technology additive manufacturing and human centered production It is particularly striking that the main approaches presented aim to improve efficiency in production using data driven methods such as machine learning and artificial intelligence However the use of measurement results to improve simulations is also frequently addressed The book proceedings show that transformations can only succeed through the

realization of both detailed technical improvements in production technologies and optimized production organization
