Question 1:

A nurse is collecting data from four clients who have wounds. The nurse should recognize that which of the following clients has manifested a wound infection?

- A. Client who has swelling and tenderness around the wound ✓
- B. Client who has serosanguineous drainage from the wound ✗
- C. Client who has bromocriptine over the wound ✗
- D. Client who has urticaria near the wound ✗

Answer and Explanation

Choice A:

Swelling and tenderness around a wound are common signs of infection. The body's inflammatory response to the invading bacteria causes these symptoms.

Choice B:

Serosanguineous drainage, which is composed of both blood and a clear yellow liquid called serum, is typically a normal part of the healing process and not necessarily a sign of infection.

Choice C:

Bromocriptine is a medication and not a sign of wound infection. This choice seems to be a distractor and does not relate to the clinical signs of a wound infection.

Choice D:

Urticaria, also known as hives, is a reaction that can be caused by an allergy, stress, or other factors, and is not a direct sign of wound infection.
