**A Fan's Guide to Baseball Analytics** Anthony Castrovine, 2020-05-12 Broken up into sections pitching fielding hitting this authoritative yet fun and easy guide will help readers young and old fully understand and comprehend the statistics that are the present and future of our national pastime We all know what a 300 hitter looks like The same with a 20 game winner Those numbers are ingrained in our brains But do they mean as much as we think Do we feel the same way when we hear a batter has a 390 wOBA How about a pitcher with a 1.2 WHIP These statistics are the future of modern baseball and no fan should be in the dark about how these metrics apply to the game In the last twenty years an avalanche of analytics has taken over the way the game is played managed and assessed but the statistics that drive the sport metrics like wRC FIP and WAR just to name a few read like alphabet soup to a large number of fans who still think batting average RBIs and wins are the best barometers for baseball players In *A Fan's Guide to Baseball Analytics* MLB.com reporter and columnist Anthony Castrovine has taken on the role as explainer to help such fans understand why the old stats don't always add up Readers will also learn where these modern stats came from what they convey and how to use them to evaluate players of the present past and future For instance what if we told you that when Joe DiMaggio had his famous 56 game hitting streak in 1941 helping him win the AL MVP that there was perhaps someone more deserving In fact the great Ted Williams actually had a higher fWAR bWAR wRC OPS OPS ISO RC well you get the picture So streak or no streak Williams should have been league MVP An introductory course on sabermetrics *A Fan's Guide to Baseball Analytics* is an easily digestible resource that readers can keep turning back to when they see a modern metric referenced in today's baseball coverage **Library/media**

**Practical Principles of Instructional Design, Media Selection, and Interface Design with a Focus on Computer-based Training / Educational Software** Peter Fenrich, 2014-03-21. This book is intended for students, instructional designers, professors, instructors, teachers, trainers, software developers, and development team leaders who are taking a course on creating computer-based training educational software applications or who will be working on a computer-based training educational software development team. Need to expand their skills into the multimedia technology field? Are excited about the possibilities of teaching with multimedia? Have worked on their own and unsuccessfully tried to do it all? May have created mediocre computer-based training educational software? Want to do it right the first time? Need a practical reference? Need practical guidelines for creating computer-managed presentations? This book focuses on the practical principles of creating computer-based training educational software applications and computer-managed presentations. In computer-based training educational software applications, the computer assumes the teaching role. In computer-managed presentations, you maintain the responsibility for teaching the learners and use what is contained in the presentation as a resource. In a sense, computer-managed presentations are a subset of computer-based training educational software applications. Their differences will be highlighted throughout this book.
