Interactive Realism Daniel Mark Downes, 2005 It is commonplace in our digitized world to think that technology is the primary agent of psychological and social change In Interactive Realism Daniel Downes argues that it continues to be people who construct social reality through their interactions critiquing the transformative turn in media studies Distinguishing between the Internet a communication system and cyberspace an environment for human exchange the author provides a framework for exploring the metaphors and images used in cyberspace to represent and model social reality He clarifies how these symbolic interactions are linked to the technologies used to create store and transmit them and to their social context Drawing on examples from digital games web design film and photography the author shows how individual experiences are calibrated by technology and how digital communication contributes to broader processes such as community building and public memory Downes articulates a nuanced form of media ecology that does not focus on a single cause of change but rather on the relationships between
