

The Endocannabinoid System (ECS)

CB1 RECEPTORS

CB1 receptors exist in the brain and spinal cord. They work to regulate appetite, memory, and to reduce pain.

CB2 RECEPTORS

CB2 receptors are most prominently in the immune system, but exist through many other areas of the body. The CB2 Receptors primary role is reducing inflammation throughout the body.

Endocannabinoids 24 The Receptors:

Endocannabinoids Emmanuel S Onaivi, Takayuki Sugiura, Vincenzo Di Marzo, 2005-11-01 Over the past decade there have been major advances in understanding the mechanisms whereby marijuana interacts with the brain in producing psychoactive and potentially therapeutic effects The discovery of specific gene coding for cannabinoid receptors activated by smoking marijuana and the finding of endogenous cannabinoids which also activate the receptors have transformed cannabinoid research into mainstream science with significant implications in human health and disease **Endocannabinoids The Brain and Body s Marijuana and Beyond** documents advances in the discovery and functioning of naturally occurring marijuana like substances in human biology It explores recent findings that point to the existence of an endocannabinoid physiological control system EPCS that directly impacts human development health and disease While cannabinoid effects on the brain have received the greatest attention throughout the literature this work looks at research on the endogenous cannabinoid system s association across all of human physiology including the immune endocrine and reproductive systems With thoroughly researched and exceptionally insightful contributions from more than three dozen top flight researchers representing a cross section of disciplines from molecular biology genetics and neurology to gynecology physiology and pharmacology this work explores a range of topics as wide as the human body is complex These topics include the EPCS s relation to cell development and regulation CNS function immune function modulation reproduction and digestion as well as its function in mental illness neurodegenerative diseases and cancer The final section in the book considers the significance of endogenous cannabinoids found in some of the simplest multicellular organisms in the animal kingdom as well as in mammalian cells at the earliest stages of development all of which suggests that they play a fundamental role in human biology **Endocannabinoids The Brain and Body s Marijuana and Beyond** explores areas that few books have ventured into providing cutting edge information that will ultimately help us better understand human biology at the systemic and perhaps even cellular level as well as lead to the development of a whole new range of medications **Neurobiology and Physiology of the Endocannabinoid System** Vinood B. Patel, Victor R Preedy, Colin R. Martin, 2023-06-02 **Neurobiology and Physiology of the Endocannabinoid System** offers readers a comprehensive reference on the neurobiology of this system and the use of cannabimimetic compounds to induce neurological changes and confer symptom relief With sections on both natural and synthetic compounds the book s broad coverage allows readers to learn about their use with multiple conditions as well as the working biology of the endocannabinoid system its receptors and its ligands This volume provides a platform for research on the effects of this system and its modulation in brain function and neurological dysfunction Summarizes research on the working neurobiology of the endocannabinoid system Contains chapter abstracts key facts a dictionary and a summary Covers both natural cannabinoids and synthetic or exogenous cannabimimetics Includes conditions like headache anxiety stress and neuroinflammation Discusses system modulation in the context of pain traumatic brain injury and obesity

Endocannabinoids Roger G. Pertwee,2015-09-25 There is currently considerable interest in the development of medicines that would enhance endocannabinoid induced autoprotection for example through inhibition of endocannabinoid metabolizing enzymes or cellular uptake processes or that would oppose endocannabinoid induced autoimpairment This volume describes the physiology pathophysiology and pharmacology of the endocannabinoid system and potential strategies for targeting this system in the clinic *The Endocannabinoid System: Filling the Translational Gap between Neuroscience and Psychiatry* Marco Colizzi,Sagnik Bhattacharyya,Danilo De Gregorio,Mirella Ruggeri,2022-01-24
