Critical Essays in Sport Management Andy Gillentine, Robert Baker, Jacquelyn Cuneen, 2017-09-29 This collection of essays written by a number of respected sport management scholars addresses many of the challenges and issues facing today's sport management academic programs. It is intended to begin a professional and scholarly discussion to identify the best or at least the most logical paths to follow for sport management programs and the industry with which they are so closely aligned. Contributors invited to participate based on their recognized areas of expertise address specific topics using their own unique voices and writing styles. In the ebook version, essays link to video introductions by the authors and to online discussion forums where readers can respond to the issues presented in the essays.

From the Preface: The field of sport management stands at an academic crossroads; the essays in this book address the following and other emerging questions: Should our successful field of study continue to model other disciplines and perpetuate their successes as well as their shortcomings, or should we determine our own specific model for academic success? How are we doing in preparing future sport managers to perform in the industry and on the global stage? Where do we belong in the scheme of academe? The book's goal is to generate discussion among sport management professors, industry professionals who serve as adjunct faculty and participate on sport management program advisory boards, doctoral students who intend to teach in sport management programs, and others who explore and critique higher education in general.

The SSCI Syndrome in Higher Education Chuing Prudence Chou, 2014-02-07 As a result of the world-class university rankings, many governments adopt public incentives and sanctions to push universities to excel. Above all, the better faculty research publication in SSCI and SCI journals, the more resources and social prestige universities will obtain. This timely book attempts to relate these dilemmas in Taiwan to many non-English speaking counterparts which also struggle with the worldwide SSCI syndrome. As Taiwan's higher education system, similar to that of some other countries, has been recently devastated by the SSCI-based quantitative evaluations of academic performance in terms of its adverse impacts on the balances between teaching vs. research, qualitative vs. quantitative evaluations, globally oriented English vs. locally oriented non-English publications, and publications in academic journals vs. books, *The SSCI Syndrome in Higher Education* is a long overdue study that offers a systematic, comprehensive coverage of the above-mentioned SSCI syndrome on the dynamics of Taiwan's academe. This book definitely helps fill an important gap in the literature on Taiwan's higher education system.

Tsung Chi, Professor of Politics, Occidental College, USA. Prudence Chou's book addresses an academy on crisis caused

by the ceaseless hype over university rankings It further confirms that who comes out on top depends on who is doing the ranking To save the heart and soul out of the Taiwanese academy this book makes a cogent argument for culturally responsive research in the social sciences and humanities Gerard A Postiglione Professor and Head Division of Policy Administration and Social Sciences Director Wah Ching Center of Research on Education in China The University of Hong Kong A spectre is haunting almost all universities in the world including Taiwan the spectre of indexization Academics particularly social scientists are panting from the pressure of globally spread neoliberal ideology and market based principles Collegiality on campus in the good old days has declined and managerialism gained power instead Competitive funding and university rankings are excessively emphasized and research results are required to be internationalized i e published in English Although this book is a case study of so called SSCI syndrome in Taiwan the problems and challenges as well as prescription contained here are common to all academics especially those in the non English speaking countries positioned as peripheral Yutaka Otsuka Professor of Hiroshima University President of Japan Comparative Education Society The danger with SSCI syndrome is that it encourages social studies in nonwestern societies to dissociate themselves from local contexts reflecting a particular view of what is claimed to be universal that is informed only by the Western especially English speaking world It raises the question of what counts as scholarship and defines what knowledge is and who may claim competence in it This volume serves us well as a timely reminder of such a great danger Rui Yang Professor Faculty of Education University of Hong Kong

Science Dynamics and Research Production Nikolay K. Vitanov, 2016-08-01 This book deals with methods to evaluate scientific productivity In the book statistical methods deterministic and stochastic models and numerous indexes are discussed that will help the reader to understand the nonlinear science dynamics and to be able to develop or construct systems for appropriate evaluation of research productivity and management of research groups and organizations The dynamics of science structures and systems is complex and the evaluation of research productivity requires a combination of qualitative and quantitative methods and measures The book has three parts The first part is devoted to mathematical models describing the

importance of science for economic growth and systems for the evaluation of research organizations of different size The second part contains descriptions and discussions of numerous indexes for the evaluation of the productivity of researchers and groups of researchers of different size up to the comparison of research productivities of research communities of nations Part three contains discussions of non Gaussian laws connected to scientific productivity and presents various deterministic and stochastic models of science dynamics and research productivity The book shows that many famous fat tail distributions as well as many deterministic and stochastic models and processes which are well known from physics theory of extreme events or population dynamics occur also in the description of dynamics of scientific systems and in the description of the characteristics of research productivity This is not a surprise as scientific systems are nonlinear open and dissipative

Research evaluation metrics
Das, Anup Kumar, 2015-04-27 Traducci n parcial de la Introducci n En la actualidad la evaluaci n de la investigaciones es una cuesti n que se est replanteando en todo el mundo En algunos casos los trabajos de investigaci n est n generando resultados

muy buenos en la mayoría de los casos los resultados son mediocres y en algunos casos negativos Por todo esto la evaluación de los resultados de la investigación se convierte en una condición sine qua non Cuando el número de investigadores eran menos eran los propios colegas de profesión quienes evaluaban la investigación Con el paso del tiempo el número de investigadores aumentó las áreas de investigación proliferaron los resultados de la investigación se multiplicaron La tendencia continuó y después de la Segunda Guerra Mundial la investigación comenzó a crecer exponencialmente Hoy en día incluso en una estimación moderada hay alrededor de más de un millón de investigadores y producen más de dos millones de trabajos de investigación y otros documentos por año En este contexto la evaluación de la investigación es una cuestión de primera importancia Para cualquier promoción acreditación premio y beca puede haber decenas o cientos de nominados De entre estos seleccionar el mejor candidato es una cuestión difícil de determinar Las evaluaciones inter pares en muchos casos están demostrando ser subjetivas En 1963 se crea Science Citation Index SCI que cubre la literatura científica desde 1961 Unos años después Eugene Garfield fundador del SCI preparó una lista de los 50 autores científicos más citados basándose en las citas que recibía el trabajo de un autor por parte de los trabajos de otros colegas de investigación El documento titulado Pueden predecirse los ganadores del Premio Nobel Fue publicado en 1968 Garfield y Malin 1968 En el siguiente año es decir 1969 dos científicos que figuran en la lista por ejemplo Derek H.R. Barton y Murray Gell-Mann recibieron el codiciado premio Esto reivindicó la utilidad del análisis de citas Cada año varios científicos pertenecientes al campo de la Física Química Fisiología y Medicina reciben el Premio Nobel De esta manera el análisis de citas se convirtió en una herramienta útil Sin embargo el análisis de citas siempre tuvo críticas y múltiples fallas Incluso Garfield comentó El uso del análisis de citas de los trabajos de evaluación es una tarea difícil Existen muchas posibilidades de error Garfield 1983 Para la evaluación de la investigación se necesitaban algunos otros indicadores El análisis de citas junto con la revisión por pares garantiza el mejor juicio en innumerables casos Pero se necesita algo que sea más exacto La llegada de la World Wide Web WWW brindó la oportunidad pues un buen número de indicadores se están generando a partir de los datos disponibles en la WWW Trad. over the last 50 years CVD remains a primary cause of global morbidity and mortality in both emerging and developed economies Due to the rising aging population in combination with an increase in cardiometabolic risk factors the number of individuals affected by CVD is currently on the rise Therefore it is of utter importance to develop new strategies aimed at reducing CVD risk and elucidate the molecular mechanisms and important players of CVD including atherosclerosis and plaque rupture and erosion Over the past years it became evident that a specific CVD atherosclerosis is a multifactorial disease that is not only driven by lipids but also by inflammation Compelling evidence that inflammation and the immune system play a crucial role in atherosclerotic CVD was provided by the landmark Canakinumab Anti inflammatory Thrombosis Outcomes Study CANTOS performed in 2017 Here it was shown that a monoclonal antibody targeting interleukin 1b IL 1b termed Canakinumab effectively reduced CVD risk and mortality especially in patients characterized with residual inflammation This effect was independent of lipid level lowering In late 2019 the inflammation hypothesis of atherosclerosis was confirmed in the Colchicine Cardiovascular Outcomes Trial COLCOT using the anti inflammatory agent colchicine in patients with recent myocardial infarction A follow up study in 2020 applying colchicine in a randomized trial involving patients with chronic coronary disease LoDoCo also showed significant risk reduction These landmark studies set the stage for identifying drug targets that block atherosclerosis specific inflammatory pathways as a highly promising strategy to reduce cardiovascular risk
