Fire Abc Shift Calendar For 2014:

Developing Synaesthesia Nicolas Rothen, Julia Simner, Beat Meier, 2015-07-24 Synaesthesia is a condition in which a stimulus elicits an additional subjective experience For example the letter E printed in black the inducer may trigger an additional colour experience as a concurrent e g blue Synaesthesia tends to run in families and thus a genetic component is likely However given that the stimuli that typically induce synaesthesia are cultural artefacts a learning component must also be involved Moreover there is evidence that synaesthetic experiences not only activate brain areas typically involved in processing sensory input of the concurrent modality synaesthesia seems to cause a structural reorganisation of the brain Attempts to train non synaesthetes with synaesthetic associations have been successful in mimicking certain behavioural aspects and posthypnotic induction of synaesthetic experiences in non synaesthetes has even led to the according phenomenological reports These latter findings suggest that structural brain reorganization may not be a critical precondition but rather a consequence of the sustained coupling of inducers and concurrents Interestingly synaesthetes seem to be able to easily transfer synaesthetic experiences to novel stimuli Beyond this certain drugs e g LSD can lead to synaesthesia like experiences and may provide additional insights into the neurobiological basis of the condition Furthermore brain damage can both lead to a sudden presence of synaesthetic experiences in previously non synaesthetic individuals and a sudden absence of synaesthesia in previously synaesthetic individuals Moreover enduring sensory substitution has been effective in inducing a kind of acquired synaesthesia Besides informing us about the cognitive mechanisms of synaesthesia synaesthesia research is relevant for more general questions for example about consciousness such as the binding problem about crossmodal correspondences and about how individual differences in perceiving and experiencing the world develop Hence the aim of the current Research Topic is to provide novel insights into the development of synaesthesia both in its genuine and acquired form We welcome novel experimental work and theoretical contributions e g review and opinion articles focussing on factors such as brain maturation learning training hypnosis drugs sensory substitution and brain damage and their relation to the development of any form of synaesthesia *AB Bookman's Weekly*, 1990 Forthcoming Books Rose Army, 2001
