Guest, Claus Hertling, 2017-10-14 The purpose of this monograph is two fold it introduces a conceptual language for the geometrical objects underlying Painlevé equations and it offers new results on a particular Painlevé III equation of type PIII D6 called PIII 0 0 4 4 describing its relation to isomonodromic families of vector bundles on  $P^1$  with meromorphic connections This equation is equivalent to the radial sine or sinh Gordon equation and as such it appears widely in geometry and physics It is used here as a very concrete and classical illustration of the modern theory of vector bundles with meromorphic connections Complex multi valued solutions on  $\mathbb{C}$  are the natural context for most of the monograph but in the last four chapters real solutions on  $\mathbb{R}^0$  with or without singularities are addressed These provide examples of variations of TERP structures which are related to tt geometry and harmonic bundles As an application a new global picture  $\mathfrak{o}_0$  is given

*Foundations of Arithmetic Differential Geometry* Alexandru Buium, 2023-11-20 The aim of this book is to introduce and develop an arithmetic analogue of classical differential geometry In this new geometry the ring of integers plays the role of a ring of functions on an infinite dimensional manifold The role of coordinate functions on this manifold is played by the prime numbers The role of partial derivatives of functions with respect to the coordinates is played by the Fermat quotients of integers with respect to the primes The role of metrics is played by symmetric matrices with integer coefficients The role of connections respectively curvature attached to metrics is played by certain adelic respectively global objects attached to the corresponding matrices One of the main conclusions of the theory is that the spectrum of the integers is intrinsically curved the study of this curvature is then the main task of the theory The book follows and builds upon a series of recent research papers A significant part of the material has never been published before      **Nonarchimedean and Tropical Geometry** Matthew Baker, Sam Payne, 2016-08-18 This volume grew out of two Simons Symposia on Nonarchimedean and tropical
