Mathematics Teachers at Work Janine T. Remillard, Beth A. Herbel-Eisenmann, Gwendolyn M. Lloyd, 2011-09-20 This book compiles and synthesizes existing research on teachers use of mathematics curriculum materials and the impact of curriculum materials on teaching and teachers with a particular emphasis on but not restricted to those materials developed in the 1990s in response to the NCTM's Principles and Standards for School Mathematics Despite the substantial amount of curriculum development activity over the last 15 years and growing scholarly interest in their use the book represents the first compilation of research on teachers and mathematics curriculum materials and the first volume with this focus in any content area in several decades

Invitation to Mathematics Konrad Jacobs, 1992-08-02 Based on a well received course designed for philosophy students this book is an informal introduction to mathematical thinking The work will be rewarding not only for philosophers concerned with mathematical questions but also for serious amateur mathematicians with an interest in the frontiers as well as the foundations of mathematics In what might be termed a sampler of the discipline Konrad Jacobs discusses an unusually wide range of topics including such items of contemporary interest as knot theory optimization theory and dynamical systems Using Euclidean geometry and algebra to introduce the mathematical mode of thought the author then turns to recent developments In the process he offers what he calls a Smithsonian of mathematical showpieces the five Platonic Solids the Mbius Strip the Cantor Discontinuum the Peano Curve Reidemeister's Knot Table the plane ornaments Alexander's Horned Sphere and Antoine's Necklace The treatments of geometry and algebra are followed by a chapter on induction and one on optimization game theory and mathematical economics The chapter on topology includes a discussion of topological spaces and continuous mappings curves and knots Euler's polyhedral formula for surfaces and the fundamental group The last chapter deals with dynamics and contains material on the Game of Life circle rotation Smale's horseshoe and stability and instability among other topics

IMO Problems, Theorems, And Methods (In 4 Volumes) Jinhua Chen,Bin Xiong,Tianqi Lin,Gengyu Zhang,Guangyu Xu,Zhenhua Qu,2025-08-13 The problems in the International Mathematical Olympiad IMO are not only novel and interesting but also deeply rooted in profound mathematical context The team at the International Mathematical Olympiad Research Center at East China Normal University has compiled and studied problems from past IMOs dividing them into four volumes based on the mathematical fields involved algebra geometry number theory and combinatorics These volumes are collectively titled IMO Problems Theorems and Methods Reprints of Papers from the Science Laboratories of the University of

Sydney ,1912 **Proceedings of the Edinburgh Mathematical Society** Edinburgh Mathematical Society,1910 **The Teaching of High School Mathematics** Jasper O. Hassler,1926 Riemannian Manifolds John M. Lee,2006-04-06 This book is designed as a textbook for a one quarter or one semester graduate course on Riemannian geometry for students who are familiar with topological and differentiable manifolds It focuses on developing an intimate acquaintance with the geometric meaning of curvature In so doing it introduces and demonstrates the uses of all the main technical tools needed for a careful study of Riemannian manifolds The author has selected a set of topics that can reasonably be covered in ten to fifteen weeks instead of making any attempt to provide an encyclopedic treatment of the subject The book begins with a careful treatment of the machinery of metrics connections and geodesics without which one cannot claim to be doing Riemannian geometry It then introduces the Riemann curvature tensor and quickly moves on to submanifold theory in order to give the curvature tensor a concrete quantitative interpretation From then on all efforts are bent toward proving the four most fundamental theorems relating curvature and topology the Gauss Bonnet theorem expressing the total curvature of a surface in term so fits topological type the Cartan Hadamard theorem restricting the topology of manifolds of nonpositive

curvature Bonnet's theorem giving analogous restrictions on manifolds of strictly positive curvature and a special case of the Cartan Ambrose Hicks theorem characterizing manifolds of constant curvature Many other results and techniques might reasonably claim a place in an introductory Riemannian geometry course but could not be included due to time constraints
