Independent and Weekly Review, 1920 **The Independent** Leonard Bacon, Joseph Parrish Thompson, Richard Salter Storrs, Joshua Leavitt, Henry Ward Beecher, Theodore Tilton, Henry Chandler Bowen, William Hayes Ward, Hamilton Holt, Fabian Franklin, Harold de Wolf Fuller, Christian Archibald Herter, 1920 *Improving Working Memory in Learning and Intellectual Disabilities* Silvia Lanfranchi, Barbara Carretti, 2016-08-05 The last forty years of research have demonstrated that working memory WM is a key concept for understanding higher order cognition To give an example WM is involved in reading comprehension problem solving and reasoning but also in a number of everyday life activities It has a clear role in the case of atypical development too For instance numerous studies have shown an impairment in WM in individuals with learning disabilities LD or intellectual disabilities ID and several researchers have hypothesized that this can be linked to their difficulties in learning cognition and everyday life The latest challenge in the field concerns the trainability of WM If it is a construct central to our understanding of cognition in typical and atypical development then specific intervention to sustain WM performance might also promote changes in cognitive processes associated with WM The idea that WM can be modified is debated however partly because of the theoretical implications of this view and partly due to the generally contradictory results obtained so far In fact most studies converge in demonstrating specific effects of WM training i e improvements in the trained tasks but few transfer effects to allied cognitive processes are generally reported It is worth noting that any maintenance effects when investigated are even more meagre In addition a number of methodological concerns have been raised in relation to the use of 1 single tasks to assess the effects of a training program 2 WM tasks differing from those used in the training to assess the effects of WM training and 3 passive control groups These and other crucial issues have so far prevented any conclusions from being drawn on the efficacy of WM training Bearing in mind that the opportunity to train WM could have a huge impact in the educational and clinical settings it seems fundamentally important to shed more light on the limits and potential of this line of research The aim of the research discussed here is to generate new evidence on the feasibility of training WM in individuals with LD and ID There are several questions that could be raised in this field For a start can WM be trained in this population Are there some aspects of WM that can be trained more easily than others Can a WM training reduce the impact of LD and ID on learning outcomes and on everyday living What kind of training program is best suited to the promotion of such changes Neurobiology of Learning and Memory James L. Estrogens and Memory Karyn M. Frick, 2020 A book about the influence of estrogens on memory would have been unthinkable as recently as 30 years ago Although a few small studies in the late 1970 s reported a beneficial effect of estrogens on memory in human women Hackman and Galbraith 1976 Fedor Freybergh 1977 examination of the role of estrogens in memory did not truly capture more widespread attention until the pioneering work of Barbara Sherwin and colleagues in 1988 and beyond In her initial paper Sherwin showed that bilateral removal of the ovaries aka surgical menopause led to impaired short term and long term memory whereas treatment of surgically menopausal women with estradiol alone testosterone alone or estradiol plus testosterone prevented this decline Sherwin 1988 As a search for the terms estrogen and memory in PubMed illustrates well over 2000 papers have been published on the subject of estrogens and memory in the ensuing decades The vast majority of these studies have focused on the hippocampus a bilateral medial temporal lobe structure essential for the formation of episodic memories particularly those with spatial contextual relational temporal and recognition components Olton et al 1979 Morris et al 1982 Kim and Fanselow 1992 Squire 1992 Cohen and Stackman 2015 Tonegawa et al 2015 Eichenbaum 2017 Although various forms of learning and memory are mediated by numerous brain regions including the prefrontal cortex medial temporal lobe cortices amygdala striatum and cerebellum the hippocampus has received the lion s share of attention due to its central importance for episodic memory formation Hippocampal damage produces profound retrograde amnesia for facts and events as well as anterograde amnesia for new information and impairments in spatial navigation Winocur 1990 Anagnostaras et al 2001 Clark et al 2002 Gilboa et al 2006 Hippocampal dysfunction in middle aged and aged subjects is a primary contributor to age related memory decline Golumb et al 1996 Grady et al 2003 Apostolova et al 2010 Burke and Barnes 2010 Small et al 2011 Yassa et al 2011 and has also been implicated in the cognitive impairments observed in diseases such as schizophrenia and depression Small et al 2011 Nakahara et al 2018 Santos et al 2018 Ott et al 2019 Moreover the hippocampi of patients with Alzheimer s disease are substantially atrophied and burdened with copious amounts of amyloid plaques and neurofibrillary tangles the hallmark pathologies of this insidious disease Hyman et al 1984 Walsh and Selkoe 2004 Selkoe and Hardy 2016 As such understanding how estrogens influence hippocampal functioning may provide important insights not only about the fundamental neurobiology of memory processes but also into the etiology of neuropsychiatric and neurodegenerative diseases
