Intelligent Computing in Smart Grid and Electrical Vehicles Kang Li, Yusheng Xue, Shumei Cui, Niu Qun, 2014-10-01 This book constitutes the third part of the refereed proceedings of the International Conference on Life System Modeling and Simulation LSMS 2014 and of the International Conference on Intelligent Computing for Sustainable Energy and Environment ICSEE 2014 held in Shanghai China in September 2014 The 159 revised full papers presented in the three volumes of CCIS 461 463 were carefully reviewed and selected from 572 submissions The papers of this volume are organized in topical sections on computational intelligence in utilization of clean and renewable energy resources including fuel cell hydrogen solar and wind power marine and biomass intelligent modeling control and supervision for energy saving and pollution reduction intelligent methods in developing electric vehicles engines and equipment intelligent computing and control in distributed power generation systems intelligent modeling simulation and control of power electronics and power networks intelligent road management and electricity marketing strategies intelligent water treatment and waste management technologies integration of electric vehicles with smart grid

Smart Energy Management for Smart Grids Khmaies Ouahada, Omowunmi Mary Longe, 2020-03-16 This book is a contribution from the authors to share solutions for a better and sustainable power grid Renewable energy smart grid security and smart energy management are the main topics discussed in this book

Handbook on New Paradigms in Smart Charging for E-Mobility Abhishek Kumar, Ramesh C. Bansal, Praveen Kumar, Xiangning He, 2025-03-21 Handbook on New Paradigms in Smart Charging for E-Mobility Global Trends Policies and Practices provides a complete package for understanding and developing smart chargers for e-mobility applications It discusses various concepts required for developing charging infrastructure and usage of different kinds of storage technologies power electronics converters controllers communication requirements grid infrastructure sustainable technologies policy frameworks and all other related crucial aspects of E-mobility Each part of the book covers a subdomain of e-mobility beginning with an introductory chapter reviewing existing literature the subsequent chapters are arranged to each follow the previous one Other available books focus on specific technical subdomains of e-mobility but none provides the wider outlook to meet the requirements of all audiences This book uniquely brings together topics that are not otherwise easily accessible or available to these audiences This book will be beneficial for engineers scientists and researchers providing them with a comprehensive standard benchmark work to explore the evolving aspects of charging infrastructure for e-mobility Further it will also help policymakers practitioners and government entities formulate policies for successful implementations of e-mobility for their masses The techno-socio-economic focus will serve as standard literature for all Takes

a modular approach with each module catering to a different sub domain of e mobility Includes standalone chapters that cover out of the box work related to e mobility Presents the latest advances and detailed technical descriptions of smart charging infrastructures

Smart Electric and Hybrid Vehicles Arif I. Sarwat, Mohd Tariq, 2025-02-05 Thorough reference on technologies designs and strategies for electric and hybrid electric vehicles featuring contributions from international experts Designed for readers who need to review different types of electric and hybrid vehicle designs and strategies in a single book Smart Electric and Hybrid Vehicles Advancements in Materials Design Technologies and Modeling provides a broad overview of the field with additional resources to explore individual topics in greater depth Abstracts case studies references to key data and relevant numerical simulations are included throughout the text to aid in reader comprehension This book introduces the global landscape of hybrid and electric vehicles covering the available technologies from both a mechanical and electrical engineering perspective presenting mathematical aspects of modeling and analysis and surveying emerging trends and economic impacts It also explains all fundamentals regulations policies perceptions and market competition aspects of intelligent electric vehicles as well as how smart electric and hybrid vehicles can be utilized to reduce harmful emissions and reliance on fossil fuels over the lifecycle of a vehicle Edited by a team of highly qualified academics with contributions by an array of international experts Smart Electric and Hybrid Vehicles Advancements in Materials Design Technologies and Modeling includes information on Electric machine and inverter designs maximum speed considerations component cooling power density and material performance Battery systems fuel cells plug in vehicles mechanical drives and storage systems and the role of power electronics tools The impact of trends and technologies like AI machine vision and digital twins as well as related cyber security considerations Optimization of manufacturing waste charging stations sensing control road trajectory prediction and navigation systems Electrical interfaces to protect against electric shock and cost effectiveness compared to gasoline powered vehicles Smart Electric and Hybrid Vehicles Advancements in Materials Design Technologies and Modeling is an essential reference on the subject for mechanical engineers industrial engineers and academic researchers working in the automotive sector It is also an ideal learning resource for post graduate students in the automotive field

Smart Materials for Science and Engineering Upendra Kumar, Piyush Kumar Sonkar, 2024-06-05 SMART MATERIALS FOR SCIENCE AND ENGINEERING Smart materials also known as advanced or creative materials are described as advanced materials that react intuitively to environmental changes or as materials that can return to their original shape in response to certain stimuli Smart materials are classified as either active or passive based on their characteristics There are two types of active materials The first kind cannot change its characteristics when subjected to outside stimuli for example photochromatic spectacles that only alter their color when exposed to sunlight The other which includes piezoelectric

materials can change one sort of energy thermal electrical chemical mechanical or optical into another When subjected to external pressure it can generate an electric charge As an example optical fibers can transmit electromagnetic waves In contrast passive smart materials can transmit a specific sort of energy They have some amazing qualities that set them apart from other materials such as transiency meaning they can react to different kinds of external stimuli immediately self actuation or the capacity to change their appearance and shape selectivity where the response is divided and expected directness when the response is limited to the activating event shape changing where the material can change its shape to external stimuli their ability to determine their own health also known as self diagnosis and their ability to self heal The ability to synthesize novel materials has substantially progressed thanks to science and technology over the past 20 years They fall mostly into the following four categories polymers ceramics metals and smart materials Among these smart materials are gaining popularity since they have more uses than conventional materials Smart materials are unusual substances that have the ability to alter their properties such as those that can immediately change their phase when placed near a magnet or their shape simply by applying heat Humanity will be significantly impacted by this new era of smart materials For instance some of them can adapt their properties to the environment some have sensory capabilities some can repair themselves automatically and some can degrade themselves These extraordinary properties of smart materials will have an effect on all facets of civilization There are many different types of intelligent materials including magnetorheological materials electro rheostat materials shape memory alloys piezoelectric materials and more This book describes many forms of smart materials and their possible uses in various fields A literature survey discusses the different types of smart materials such as based ceramics polymers and organic compounds and their needs advantages disadvantages and applications will be comprehensively discussed A discussion of well established smart materials including piezoelectric magnetostrictive shape memory alloy electro rheological fluid and magnetorheological fluid materials will be discussed with their present prospects

Development of Electric Vehicles in Smart Grid Concepts Supriya Jaiswal,Ajay Kumar,Sanjeevikumar Padmanaban,2025-08-01 Development of Electric Vehicles in Smart Grid Concepts presents a guide to the design development and deployment of electric vehicles in smart grids The book examines the current technological progression of power electronic converters for smart grid operation and EV technology as well as providing the international standards policies and market needs to ensure readers understand the nuanced requirements of the grid The book begins by introducing EVs encompassing their historical evolution current status and potential advancements It delves into the architecture components working modes and technological challenges within EVs There is a dedicated chapter on international standards governmental policies and codes for implementation followed by the integration of EVs into smart grids discussing infrastructure requirements impacts and integration modes V2G G2V V2B and V2H Technical aspects modeling and optimization methods for EV scheduling are explored alongside battery modeling degradation charging

standards SOC estimation and battery management systems Additionally the book examines EV interaction with smart grids renewable energy sources energy storage systems global market surveys and future trends Provides set by step design development and deployment procedures for electric vehicles in the context of smart grid technology Describes international standards and policies in the context of EV s and their integration in smart grids Examines the entire concept of EVs including energy storage systems battery modeling degradation grid integration policies and market perspectives *Three Revolutions* Daniel Sperling,2018-03 Front Cover About Island Press Subscribe Title Page Copyright Page Contents Preface Acknowledgments 1 Will the Transportation Revolutions Improve Our Lives or Make Them Worse 2 Electric Vehicles Approaching the Tipping Point 3 Shared Mobility The Potential of Ridehailing and Pooling 4 Vehicle Automation Our Best Shot at a Transportation Do Over 5 Upgrading Transit for the Twenty First Century 6 Bridging the Gap between Mobility Haves and Have Nots 7 Remaking the Auto Industry 8 The Dark Horse Will China Win the Electric Automated Shared Mobility Race Epilogue Notes About the Contributors Index IP Board of Directors Automotive Fuel and Emissions Control Ekaling Jain,2025-01-03 Automotive Fuel and Emissions Control emphasizes the troubleshooting and diagnostic aspects of emissions control systems and automotive fuel We cover all factors related to this field aligning with the latest NATEF tasks This book caters to the educational needs of students worldwide especially those studying automotive fuels and emissions control systems We also focus on meeting the requirements of professional technicians addressing the need for improved training standards Our book aims to equip budding technicians with the necessary skills for effective diagnostics and procedures fulfilling both basic and advanced needs
