

How Science Works

- The study of phototropism is a classic example of how the scientific process works.
- It took over a century of experiments to unravel phototropism.
- Various scientists were involved, each testing and building on work done by their predecessors.

The Blue Light Syndrome H. Senger,2012-12-06

Investigations on the specific effects of blue light on plants began some fifty years ago In recent years the growing awareness of blue light induced phenomena in plants microorganisms and animals has accelerated and expanded this research into an ever increasing variety of blue light effects in biological systems In 1977 J A Schiff and W R Briggs proposed a specific meeting to present and summarize the various blue light effects and to discuss their mechanisms and possible photoreceptors In view of the variety of responses and the range of organisms affected by blue light the term Blue Light Syndrome seemed to be the only appropriate one for the meeting With the help of the International Advisory Committee W R Briggs Stanford J Gressel Rehovot W Kowallik Bielefeld S Miyachi Tokyo W Rau Munich and J A Schiff Waltham and the very generous financial support provided by the Deutsche Forschungsgemeinschaft as well as by the Bundesministerium für Forschung und Technologie the Kultusminister des Landes Hessen and the Philipps Universität Marburg the International Conference on the Effect of Blue Light in Plants and Microorganisms was held in July 1979 in the Philipps Universität Marburg

Photomovement D.-P. Häder,M. Lebert,2001-06-19 This volume emphasizes the involvement of all facets of biology in the analysis of environmentally controlled movement responses This includes biophysics biochemistry molecular biology and as an integral part of any approach to a closer understanding physiology The initial euphoria about molecular biology as the final solution for any problem has dwindled and the field agrees now that only the combined efforts of all facets of biology will at some day answer the question posed more than hundred years ago How can plants see One conclusion can be drawn from the current knowledge as summarized in this volume The answer will most likely not be the same for all systems

Progress in Plant Growth Regulation Cees M. Karssen,Leendert C. Loon,Dick Vreugdenhil,1992 The current growing interest of molecular biologists in plant hormone research is a promising development Many papers were presented during the 14th International Conference on Plant Growth Substances illustrating the impact of this new approach on our understanding of hormone controlled processes The specific character is the integrated study of plant growth regulation at all levels ranging from single molecules to the entire plant and its functioning in the environment
