M. Helmreich,2001 The Biochemistry of Cell Signalling deals in depth with the principles of cell signalling concentrating on structure and mechanism It will serve as a reliable map through the maze of cell signalling pathways and help the reader understand how malfunctions in these pathways can lead to disease The book is divided into four parts Part 1 describes the machinery of signal transduction starting with the properties of signals receptors including receptor activation regulators and the molecules that link receptor and regulator The design of signalling cascades is explained by describing central signalling pathways the Ras regulated MAPK and PI 3 pathways the Rho Rac Cdc 42 pathway controlling chemotaxis and regulating the cytoskeleton the G protein coupled receptor cascades in response to sensory and hormonal signals signalling by TGF in morphogenesis cytokine signalling that controls haemopoiesis There is also a discussion of the insulin response As phosphorylation dephosphorylation is involved in nearly all cellular regulatory processes Part 1 concludes with a synopsis of its role in signalling Part 2 describes the implementation of the signalling cascades

focusing on the effect on gene transcription After a brief description of the transcriptional machinery the regulation of transcription by cytokines and growth factors in the control of cell growth and the mechanisms and sites of control are discussed in detail The regulators discussed include Jun Fos NF AT SREBPs and STATs The next two chapters cover gene regulation by nuclear receptors including both the steroid hormone receptors and non steroid nuclear receptors e g the retinoic acid receptors RAR and RXR Part 3 studies the global cellular regulatory programs for the control of cell growth and proliferation The first chapter concerns the regulation of the cell cycle and the role of the cyclin dependent kinases telomerase Ran and cell cycle checkpoints The next topic is the signalling pathways in apoptosis the TNF receptor family death receptors caspases and the intracellular apoptosis signals and the role of apoptosis in the lifecycle of cells Part 3 ends with a discussion of the signal pathways involved in the immune response focusing on the involvement of cell cell interactions Part 4 considers loss of regulatory control and its consequences with respect to the molecular basis of cancer It first describes the cellular regulatory proteins that have oncogenic potential how they can become oncogenic and cause the transformation of normal cells to cancerous cells Next is an analysis of the loss of developmental controls the APC protein catenin and the Wnt pathway that lead to mature terminally differentiated cells reverting to immature embryonic cells The book ends with a summary of the molecular and cellular causes of cancer and an outlook for novel therapies Throughout the text the emphasis is on structure and mechanism and is well illustrated with 200 figures The Biochemistry of Cell Signalling will be an invaluable companion to all graduate students studying cell signalling
