predicting corporate bankruptcy aims to describe the relation between bankruptcy and a number of explanatory financial ratios. These ratios can be calculated from the information contained in a company's annual report. The aim is to obtain a method for timely prediction of bankruptcy, a so-called early warning system. More recently, this subject has attracted the attention of researchers in the area of machine learning, e.g. Shaw and Gentry 1990, Fletcher and Goss 1993 and Tam and Kiang 1992. This research is usually directed at the comparison of machine learning methods such as induction of classification trees and neural networks with the standard statistical methods of linear discriminant analysis and logistic regression. In earlier research, Feelders et al. 1994 performed a similar comparative analysis. The methods used were linear discriminant analysis, decision trees, and neural networks. We used a data set which contained 139 annual reports of Dutch industrial and trading companies. The experiments showed that the estimated prediction error of both the decision tree and neural network were below the estimated error of the linear discriminant. Thus, it seems that we can gain by replacing the traditionally used linear discriminant by a more flexible classification method to predict corporate bankruptcy. The data set used in these experiments was very small, however.

*Digital Transformation Shaping the Subconscious Minds of Organizations* Werner Leodolter, 2017-07-11. This book offers a new framework for conceptualizing and managing organizations when using new information and communication technologies, for example, decision support and artificial intelligence. The book supports managers to actively guide the digital transformation of an organization through its strong metaphor of the subconscious mind of organizations. By designing and developing the subconscious mind, future organizations will evolve as successful and sustainable when implementing hybrid intelligences with a significant share of artificial intelligence, but with the clear primacy of the human. The author draws upon the psychological aspects of decision making, taking the reader from perception to analysis, conclusions, and on to decision and action. Short, lucid stories support the conceptual ideas and form three narrations about the future of manufacturing, healthcare, and retail. The effects of incorporating new technologies like sensors, visual analytics, decision support, artificial intelligence, and robotics are explored. The reader gains a comprehensive view on management and organizational behavior, both as it is now and expectations for the future. This book will have wide appeal: information managers, strategists, organizational developers, management consultants, and management students will find valuable support in this book, which enables them to triumph in the digital transformation. The thought-provoking set of guiding principles and the ideas explored have something to offer to all those interested in the future of organizations, economics, and society.
