Sustainable Development - The Roles Of Carbon And Bio-carbon: An Introduction To Molecular Sciences Pierre

Vogel,2022-06-21 Due to overconsumption of fossil carbon humanity faces four major problems global warming decrease of biodiversity pollution of the biosphere and the degradation of agriculture soils It is not enough to reduce our greenhouse gas emissions by stopping the consumption of fossil carbon it is also urgent to remove carbon dioxide from the atmosphere In order to understand the challenges outlined above a minimal knowledge of the most important carbon compounds and their transformations is an asset This textbook is therefore an introduction to the molecular sciences and shows how we depend on carbon compounds what they are and how they are transformed Plant biomass including agricultural forestry and urban wastes is the source of bio carbon that can replace fossil carbon In addition we will always need carbon containing substances for our comfort and health These important topics are covered in this textbook Life begins with water carbon dioxide and the sun Carbon dioxide is not a waste but a starting material for a better life Biomass and carbon dioxide are our best allies in sustainable development circular economy This textbook explains why This book contains 100 problems and solutions more than 180 colour pages and bibliographical sketches of most important scientists and inventors

The Statistical Mechanics of Irreversible Phenomena Pierre Gaspard,2022-07-28 This book provides a comprehensive and self contained overview of recent progress in nonequilibrium statistical mechanics in particular the discovery of fluctuation relations and other time reversal symmetry relations The significance of these advances is that nonequilibrium statistical physics is no longer restricted to the linear regimes close to equilibrium but extends to fully nonlinear regimes These important new results have inspired the development of a unifying framework for describing both the microscopic dynamics of collections of particles and the macroscopic hydrodynamics and thermodynamics of matter itself The book discusses the significance of this theoretical framework in relation to a broad range of nonequilibrium processes from the nanoscale to the macroscale and is essential reading for researchers and graduate students in statistical physics theoretical chemistry and biological physics
