Aerodynamic Design of Transport Aircraft Ed Obert, 2009 The origin of Aerodynamic Design of Transport Aircraft stems from the time when the author was appointed part time professor in the Aerospace Faculty of Delft University of Technology At the time his main activities were those of leading the departments of Aerodynamics Performance and Preliminary Design at Fokker Aircraft Company The groundwork for this book started in 1987 as a series of lecture notes consisting mainly of pictorial material with a minimum of English explanatory text After the demise of Fokker in 1996 one feared that interest in aeronautical engineering would strongly diminish As a result of this the course was discontinued and the relationship between the author and the faculty came to an end Two years later the situation was reappraised and the interest in aeronautical engineering remained so the course was reinstated with a former Fokker colleague Ronald Slingerland as lecturer The lecture notes from these courses form the foundation of this publication

Human Factors Gunnar Fahlgren, 2011-12-12 The purpose of this book is that readers might get interested in every day psychology Human Factors their own functions and how these can be used to improve their own well being like stress management in order to function better It is a book for management for staff members teachers parents health care professions flight deck crew cabin crew engineers flight controllers maritime crews

Loukopoulos,R. Key Dismukes,Immanuel Barshi,2016-03-03 Despite growing concern with the effects of concurrent task demands on human performance and research demonstrating that these demands are associated with vulnerability to error so far there has been only limited research into the nature and range of concurrent task demands in real world settings This book presents a set of NASA studies that characterize the nature of concurrent task demands confronting airline flight crews in routine operations as opposed to emergency situations The authors analyze these demands in light of what is known about cognitive processes particularly those of attention and memory with the focus upon inadvertent omissions of intended actions by skilled pilots The studies reported within the book employed several distinct but complementary methods ethnographic observations analysis of incident reports submitted by pilots and cognitive task analysis They showed that concurrent task management comprises a set of issues distinct from though related to mental workload an area that has been studied extensively by human factors researchers for more than 30 years This book will be of direct relevance to aviation psychologists and to those involved in aviation training and operations It will also interest individuals in any domain that involves concurrent task demands for example the work of emergency room medical teams Furthermore the countermeasures presented in the final chapter to reduce vulnerability to errors associated with concurrent task demands can readily be adapted to work in diverse domains **Fundamentals of Aerospace Medicine** Jeffrey Davis,Jan
