Driving Desired Futures Michael Shamiyeh, 2014-01-23 Headed by the slogan Design Thinking a debate has unfolded over the last ten years about design methods which goes far beyond the specialist boundaries of design disciplines Executives and business owners today recognize the potential for economic innovation lying in the creative and analytical mindset of designers The extensive literature available on Design Thinking focuses on the methodology of the design process while the conditions necessary to spark innovation processes in the first place have long remained more or less unnoticed Driving Desired Futures starts here and asks how established innovations arise from a simple idea What criteria are mostly likely to be the basis from which the ideas of an individual can take hold in a social system What are conditions under which they can become incorporated into a diverse group of people What topics induce managers to choose and then to invest in a specific idea Questions such as these are pursued in international contributions by renowned experts using the first digital

camera as a case study They identify the individual and social processes associated with the exchange and implementation of new ideas

*Inventive Minds* Robert John Weber, David N. Perkins, 1992 Is invention really 99 percent perspiration and one percent inspiration as Thomas Edison assured us Inventive Minds assembles a group of authors well equipped to address this question contemporary inventors of important new technologies historians of science and industry and cognitive psychologists interested in the process of creativity In telling their stories the inventors describe the origins of such remarkable devices as ultrasound the electron microscope and artificial diamonds The historians help us look into the minds of innovators like Thomas Edison Alexander Graham Bell Michael Faraday and the Wright brothers drawing on original notebooks and other sources to show how they made their key discoveries Finally cognitive psychologists explore the mental processes that figure in creative thinking Contributing to the authors insight is their special focus on the front end of invention where ideas come from and how they are transformed into physical prototypes They answer three questions How does invention happen How does invention contrast with other commonly creative pursuits such as scientific inquiry musical composition or painting And how might invention best happen that is what kinds of settings conditions and strategies appear to foster inventive activity The book yields a wealth of information that will make absorbing reading for cognitive and social psychologists social historians and many working scientists and general readers who are interested in the psychology of personality and the roots of ingenuity
