Introductions and Movement of Two Penaeid Shrimp Species in Asia and the Pacific Mathew Briggs, Food and Agriculture Organization of the United Nations, 2005-01-01 Both *Penaeus vannamei* and *P. stylirostris* are introduced species in Asia and the Pacific They have now become important commercial shrimp species in many countries in Asia The main reason behind the importation of *P. vannamei* to Asia has been the perceived poor performance slow growth rate and disease susceptibility of the major

indigenous cultured shrimp species *P chinensis* in China and *P monodon* virtually everywhere else. However for many reasons particularly with the evidence of the introduction of exotic viruses to the region there has been caution on the part of many Asian governments for the introduction of *P vannamei* and *P stylirostris*. Nevertheless this caution has not been demonstrated by the private sector which has been bringing stocks of illegal and often disease carrying *P vannamei* into Asia from many locations as well as moving infected stocks within Asia. The commercial success of these introductions despite disease problems has allowed the development of substantial culture industries for these alien penaeids within Asia particularly in China and Thailand. One effect of this is that it is rapidly becoming difficult to control the importation and development of this new industry. This report attempts to gather all of the currently available data on the extent of *P vannamei* and *P stylirostris* importation and culture in Asia its potential problems and benefits and in this way to serve as a source document from which to investigate further means by which control over this issue might be re established. Recommendations aimed at controlling the importation testing and culture of these species have been made for all levels and are included in this report.

Butler, 1984 **Regional Consultative Workshop on Antimicrobial Resistance Risk Associated with Aquaculture in the Asia-Pacific** Food and Agriculture Organization of the United Nations, 2021-07-05

Aquaculture sector in Asia Pacific has grown rapidly during the past four decades and contributed significantly to food security nutrition livelihood and overall socioeconomic development in the region. Meanwhile disease problem has become increasingly challenging in aquaculture. Un prudent and poorly controlled use of anti microbial in animal disease control in aquaculture can have significant contribution to AMR risk. Although the control over the use of antimicrobial in aquaculture through some regulatory frameworks has been strengthened over the past decade in the region it is far from adequate and effective in many Asian countries. In order to support the members to effectively address AMR in aquaculture for public health and sustainability of the sector FAO and Network of Aquaculture Centres in Asia Pacific NACA jointly organized the regional consultation on AMR associated with aquaculture in Asia Pacific on 4-6 September 2018. This publication documents the conduct of the regional consultation and its outputs which identified major issues and gaps in tackling AMR issue in aquaculture and recommended desirable interventions and long term strategy to effectively mitigate AMR risk related to aquaculture in the region. The document also includes the seven country case studies on status of use of antimicrobial in aquaculture and the efforts to manage the risks of antimicrobial resistance which were presented at the regional consultation.
