and policy makers have issued a call to college biology professors to transform undergraduate life sciences education As a
gateway science for many undergraduate students biology courses are crucial to addressing many of the challenges we face
such as climate change sustainable food supply and fresh water and emerging public health issues While canned laboratories
and cook book approaches to college science education do teach students to operate equipment make accurate
measurements and work well with numbers they do not teach students how to take a scientific approach to an area of
interest about the natural world Science is more than just techniques measurements and facts science is critical thinking and
interpretation which are essential to scientific research Discovery Based Learning in the Life Sciences presents a different
way of organizing and developing biology teaching laboratories to promote both deep learning and understanding of core
concepts while still teaching the creative process of science In eight chapters the text guides undergraduate instructors in
creating their own discovery based experiments The first chapter introduces the text delving into the necessity of science
education reform The chapters that follow address pedagogical goals and desired outcomes incorporating discovery based
laboratory experiences realistic constraints on such lab experiments model scenarios and alternate ways to enhance student
