Applied Algebra, Algebraic Algorithms, and Error-correcting Codes ,1988 How Surfaces Intersect In Space: An Introduction To Topology (2nd Edition) J Scott Carter, 1995-05-11 This marvelous book of pictures illustrates the fundamental concepts of geometric topology in a way that is very friendly to the reader The first chapter discusses the meaning of surface and space and gives the classification of orientable surfaces In the second chapter we are introduced to the Möbius band and surfaces that can be constructed from this non orientable piece of fabric In chapter 3 we see how curves can fit in surfaces

and how surfaces can fit into spaces with these curves on their boundary Basic applications to knot theory are discussed and four dimensional space is introduced In Chapter 4 we learn about some 3 dimensional spaces and surfaces that sit inside them These surfaces help us imagine the structures of the larger space Chapter 5 is completely new It contains recent results of Cromwell Izumiya and Marar One of these results is a formula relating the rank of a surface to the number of triple points The other major result is a collection of examples of surfaces in 3 space that have one triple point and 6 branch points These are beautiful generalizations of the Steiner Roman surface Chapter 6 reviews the movie technique for examining surfaces in 4 dimensional space Various movies of the Klein bottle are presented and the Carter Saito movie move theorem is explained The author shows us how to turn the 2 sphere inside out by means of these movie moves and this illustration alone is well worth the price of the book In the last chapter higher dimensional spaces are examined from an elementary point of view This is a guide book to a wide variety of topics It will be of value to anyone who wants to understand the subject by way of examples Undergraduates beginning graduate students and non professionals will profit from reading the book and from just looking at the pictures

ISScapades Donald A. Beattie,2006 Donald A Beattie served on the Space Station Advisory Committee from 1987 to 1994 He recounts the evolution of this troubled program from the perspective of a participant and close observer who worked side by side with many of the early NASA Space Station managers He pulls no punches in describing the political and managerial conflicts that resulted in severely compromising a major international program that may never achieve the research goals envisioned when first announced by President Reagan in 1984

Algorithmic and Experimental Methods in Algebra, Geometry, and Number Theory Gebhard Böckle,Wolfram Decker,Gunter Malle,2018-03-22 This book presents

state of the art research and survey articles that highlight work done within the Priority Program SPP 1489 Algorithmic and Experimental Methods in Algebra Geometry and Number Theory which was established and generously supported by the German Research Foundation DFG from 2010 to 2016 The goal of the program was to substantially advance algorithmic and experimental methods in the aforementioned disciplines to combine the different methods where necessary and to apply them to central questions in theory and practice Of particular concern was the further development of freely available open source computer algebra systems and their interaction in order to create powerful new computational tools that transcend the boundaries of the individual disciplines involved The book covers a broad range of topics addressing the design and theoretical foundations implementation and the successful application of algebraic algorithms in order to solve mathematical research problems It offers a valuable resource for all researchers from graduate students through established experts who are interested in the computational aspects of algebra geometry and or number theory
