## **Life Sciences Pfeb March 2015:**

**The Cambridge Handbook of Information Technology, Life Sciences and Human Rights** Marcello Ienca, Oreste Pollicino, Laura Liguori, Elisa Stefanini, Roberto Andorno, 2022-05-26 Debates on the human rights implications of new and emerging technologies have been hampered by the lack of a comprehensive theoretical framework for the complex issues involved. This volume provides that framework, bringing a multidisciplinary and international perspective to the evolution of human rights in the digital and biotechnological era. It delves into the latest frontiers of technological innovation in the life sciences and information technology sectors such as neurotechnology, robotics, genetic engineering, and artificial intelligence. Leading experts from the technological, medical, and social sciences, as well as law, philosophy, and business, share their extensive knowledge about the transformation of the rights framework in response to technological innovation. In addition to providing a comprehensive interdisciplinary and international state-of-the-art descriptive analysis, the volume also offers policy recommendations to protect and promote human rights in the context of emerging socio-technological trends. **New Weapons to Control Bacterial Growth** Tomas G. Villa, Miguel Vinas, 2016-03-24 Written by specialists in the different fields, this book presents new perspectives and insights into strategies and weapons to fight microbial infections. It also reviews the state-of-the-art of alternative treatment approaches and new therapeutic agents to deal with infections caused by multidrug-resistant microorganisms. In an era of accumulated resistance to current antibiotics, it is vital that this is undertaken without further delay. Aspects discussed include the control of RNA synthesis, the use of bacteriocins or enzybiotics, bacteriophages, or purified lysins; the specific control of pathogenic clostridia; the design of new drugs affecting DNA synthesis in bacteria; the use of fecal matter transplant strategies; the specific control of quorum sensing responses in bacteria; the use of new peptides as antibiotics; and new ways to control bacteria that cause cancer, such as *Helicobacter pylori* cancers. **Science, the State and the City** Geoffrey Owen, Michael M. Hopkins, 2016 The book is about the link between science and business: how discoveries made in academic laboratories are taken up by venture capitalists and investors and converted into products which, if they are successful, provide treatments for disease and may generate substantial returns for investors. *The Experiential Library* Pete McDonnell, 2016-09-07 The *Experiential Library: Transforming Academic and Research Libraries through the Power of Experiential Learning* features contributions in a relatively conversational, practical, and how-to format from various academic libraries across broad educational levels that have implemented experiential learning programs, services, or resources to enhance the learning and development of both students and library employees. As academic libraries and academic librarians are seeking ways to transform themselves and create collaborative synergies within and without their institutions, this timely book suggests exciting ways to integrate experiential learning into the library's offerings. Ranging from integrated service learning and Information Literacy instruction that takes the class out of the classroom to unique experiential approaches to programming like Course Exhibits and the Human Library, the book is a one-stop shop for

libraries looking to expand their repertoire It will also help them create connections between experiential learning and their institutions missions and contributions to student success by grounding these programs and services on a sure methodological footing Librarians and educators wishing to learn more about the connections between experiential learning experiential education and academic libraries would benefit from the advice from authors in this book Covers experiential learning for academic and research libraries Presents diverse aspects of experiential learning in academic libraries across the spectrum of educational levels Offers a one stop shop for librarians keen on bringing experiential learning to their institutions Adds to current conversations in both LIS and experiential education enabling further synergies in both disciplines

**Theology, Science and Life** Carmody Grey,2023-01-26 Offering a bold intervention in the ongoing debate about the relationship between theology and science Theology Science and Life proposes that the strong demarcation between the two spheres is unsustainable theology occurs within and not outside what we call science and science occurs within and not outside theology The book applies this in a penetrating way to the most topical contentious and philosophically charged science of late modernity biology Rejecting the easy dualism of expressions such as theology and science theology or science modern biology is examined so as to illuminate the nature of both In making this argument the book achieves two further things It is the first major English language reception and application of the thought of philosopher Hans Jonas in theology and it makes a decisive contribution to the unfolding reception of Radical Orthodoxy one of the most influential schools in contemporary Anglophone theology

*LuxR Solos Are Becoming Major Players in Cell-Cell Communication in Bacteria* Vittorio Venturi,Brian M.M. Ahmer,2016-08-11 The most common quorum sensing QS system in Gram negative bacteria occurs via N acyl homoserine lactone AHLs signals An archetypical system consists of a LuxI family protein synthesizing the AHL signal which binds at quorum concentrations to the cognate LuxR family transcription factors which then control gene expression by binding to specific sequences in target gene promoters QS LuxR family proteins are approximately 250 amino acids long and made up of two domains at the N terminus there is an autoinducer binding domain whereas the C terminus contains a DNA binding helix turn helix HTH domain QS LuxRs display surprisingly low similarities 18-25% even if they respond to structurally similar AHLs 95% of LuxRs share 9 highly conserved amino acid residues six of these are hydrophobic or aromatic and form the cavity of the AHL binding domain and the remaining three are in the HTH

domain With only very few exceptions the luxI R cognate genes of AHL QS systems are located adjacent to each other The sequencing of many bacterial genomes has revealed that many proteobacteria also possess LuxRs that do not have a cognate LuxI protein associated with them These LuxRs have been called orphans and more recently solos LuxR solos are widespread in proteobacterial species that possess a canonical complete AHL QS system as well as in species that do not In many cases more than one LuxR solo is present in a bacterial genome Scientists are beginning to investigate these solos Are solos responding to AHL signals If present in a bacterium which possesses a canonical AHL QS system are solos an integral part of the regulatory circuit Are LuxR solos eavesdropping on AHLs produced by neighboring bacteria Have they evolved to respond to different signals instead of AHLs and are these signals endogenously produced or exogenously provided Are they involved in interkingdom signaling by responding to eukaryotic signals Recent studies have revealed that LuxR solos are involved in several mechanisms of cell cell communication in bacteria implicating them in bacterial intraspecies and interspecies communication as well as in interkingdom signaling by responding to molecules produced by eukaryotes LuxR solos are likely to become major players in signaling since they are widespread among proteobacterial genomes and because initial studies highlight their different roles in bacterial communication This Research Topic allows scientists studying or interested in LuxR solos to report their data and or express their hypotheses and thoughts on this important and currently understudied family of signaling proteins

Managing Discovery in the Life Sciences Philip A. Rea, Mark V. Pauly, Lawton R. Burns, 2018-02-01 In this book distinguished scholars Philip A Rea Mark V Pauly and Lawton R Burns explore the science and management behind marketable biomedical innovations They look at how the science actually played out through the interplay of personalities the cultures within and between academic and corporate entities and the significance of serendipity not as a mysterious phenomenon but one intrinsic to the successes and failures of the experimental approach With newly aggregated data and case studies they consider the fundamental economic underpinnings of investor driven discovery management not as an obstacle or deficiency as its critics would contend or as something beyond reproach as some of its proponents might claim but as the only means by which scientists and managers can navigate the unknowable to discover new products and decide how to sell them so as to maximize the likelihood of establishing a sustainable pipeline for still more marketable biomedical innovations

**Ballroom Biology: Recent Insights into Honey Bee Waggle Dance**

**Communications** Roger Schürch, Margaret J. Couvillon, Madeleine Beekman, 2016-03-02 The honey bee waggle dance communication is a complex unique at times controversial and ultimately fascinating behavior In an elaborate figure of eight movement a returning forager conveys the distance and direction from the hive to resources usually the nectar and pollen that is their food and it remains one of the most sophisticated known forms of non human communication Not surprisingly since its discovery more than 60 years ago by Karl von Frisch the dance has been subject to investigations that span from basic biology through human culture and neurophysiology to landscape ecology Here we collate recent advances in our

understanding of the dance      *Handbook of Software Solutions for ICME* Georg J. Schmitz, Ulrich Prahl, 2016-09-20 As one of the results of an ambitious project this handbook provides a well structured directory of globally available software tools in the area of Integrated Computational Materials Engineering ICME The compilation covers models software tools and numerical methods allowing describing electronic atomistic and mesoscopic phenomena which in their combination determine the microstructure and the properties of materials It reaches out to simulations of component manufacture comprising primary shaping forming joining coating heat treatment and machining processes Models and tools addressing the in service behavior like fatigue corrosion and eventually recycling complete the compilation An introductory overview is provided for each of these different modelling areas highlighting the relevant phenomena and also discussing the current state for the different simulation approaches A must have for researchers application engineers and simulation software providers seeking a holistic overview about the current state of the art in a huge variety of modelling topics This handbook equally serves as a reference manual for academic and commercial software developers and providers for industrial users of simulation software and for decision makers seeking to optimize their production by simulations In view of its sound introductions into the different fields of materials physics materials chemistry materials engineering and materials processing it also serves as a tutorial for students in the emerging discipline of ICME which requires a broad view on things and at least a basic education in adjacent fields
