Abstract

[illegible][illegible]

The system is designed to operate in several 100-2000 Hz ranges only. It can also operate in the audio range at any other points desired. The manufacturer designed the radio to be a vacuum tube type operating. The radio should be converted to an IC radio like it is stated that "The fact doesn't tell us what has happened by a well-known. When the power in the radio is increased, the radio without battery supply can be increased five times without problems. To maximize the life of the circuit, it is best to use the radio continuously in a 100-2000 Hz range only."

Abstract: The purpose of this study was to determine the effect of a 12-week, low-intensity, supervised walking program on the physical and psychological health of sedentary, middle-aged women. The study was a randomized, controlled trial. The subjects were 40 sedentary, middle-aged women who were randomly assigned to either a supervised walking program or a control group. The walking program consisted of 12 weeks of supervised walking, 3 times per week, for 30 minutes per session. The control group consisted of 20 women who did not participate in the walking program. The subjects were assessed at baseline and at 12 weeks. The walking program had a significant positive effect on the physical and psychological health of the subjects. The walking program significantly improved the subjects' physical health, as measured by the 6-minute walk test, and their psychological health, as measured by the Beck Depression Inventory and the State-Trait Anxiety Inventory. The walking program also had a significant positive effect on the subjects' quality of life, as measured by the SF-36. The walking program was a safe and effective intervention for improving the physical and psychological health of sedentary, middle-aged women.
