Jacobson,Rodney L. Doran,1991      **Changing the Subject** J. Myron Atkin,Paul Black,2005-11 This book is based on a set of stories from teachers and education professionals in thirteen OECD countries Twenty three case studies tell of innovations in practice involving school teachers inspectors academics and policy makers      Contexts of Learning Mathematics and Science Sarah J. Howie,Tjeerd Plomp,2006-04-18 This book is the result of research from over fifteen countries asking which background and environmental factors influence achievement in mathematics and science This research is based on data from the Third International Mathematics and Science Study TIMSS which was conducted under the auspices of the International Association for the Evaluation of Educational Achievement IEA in 1995 and 1998 In many countries researchers have started secondary analysis of the data in search for relationships between contextual factors and achievement In these analyses two

different approaches can be distinguished which can be characterised by the metaphors of fishing and hunting. In the fishing approach researchers begin with an open mind considering all possible context variables as potentially influential. Applying analysis techniques such as regression analysis, LISREL, PLS, HLM and MLN they then identify important factors within their countries or across a number of countries. In the hunting approach researchers hypothesise certain context variables and trace the effect of these variables on mathematics and/or science achievement.
