Killings in Britain Christina Julios,2016-03-09 This book explores the contemporary phenomenon of forced marriage and honour killings in Britain Set against a background of increasing honour based violence within the country s South Asian and Muslim Diasporas the book traces the development of the honour question over the past two decades It accordingly witnesses unprecedented changes in public awareness and government policy including ground breaking honour specific legislation and the criminalisation of forced marriage All of which makes Britain an important context for the study of this now indigenous and self perpetuating social problem In considering the scale of the challenge and its underlying causes attention is paid to the intersections of gendered power structures that disadvantage female members of honour cultures as well as feminist theories that seek to explain them The book features five key case studies of honour killings and draws from a wide range of narratives including those of honour violence survivors grassroots service providers and legislators Such

myriad of perspectives reveals the complexity of the honour issue and the deep ideological divisions that characterise it With the UK s multiculturalist discourse unable to reconcile protecting patriarchal minority cultures with safeguarding gender equality and human rights the book raises fundamental questions about the country s future direction Following a long trend of state sponsored integrationist policies the government s response to the honour question points decisively in the direction of a post multicultural British nation

Transfer Cells David McCurdy, Gregorio Hueros, 2015-05-18 Transfer cells are anatomically specialized cells optimized to support high levels of nutrient transport in plants These cells trans differentiate from existing cell types by developing extensive and localized wall ingrowth labyrinths to amplify plasma membrane surface area which in turn supports high densities of membrane transporters Unsurprisingly therefore transfer cells are found at key anatomical sites for nutrient acquisition distribution and exchange Transfer cells are involved in delivery of nutrients between generations and in the development of reproductive organs and also facilitate the exchange of nutrients that characterize symbiotic associations Transfer cells occur across all taxonomic groups in higher plants and also in algae and fungi Deposition of wall ingrowth like structures are also seen in syncytia and giant cells which function as feeding sites for cyst and root knot nematodes respectively following their infection of roots Consequently the formation of highly localized wall ingrowth structures in diverse cell types appears to be an ancient anatomical adaption to facilitate enhanced rates of apoplasmic transport of nutrients in plants In some systems a role for transfer cells in the formation of an anti pathogen protective barrier at these symplastic discontinuities has been inferred Remarkably the extent of cell wall ingrowth development at a particular site can show high plasticity suggesting that transfer cell differentiation might be a dynamic process adapted to the transport requirements of each physiological condition Recent studies exploiting different experimental systems to investigate transfer cell biology have identified signaling pathways inducing transfer cell development and genes gene networks that define transfer cell identity and or are involved in building the wall ingrowth

labyrinths themselves Further studies have defined the structure and composition of wall ingrowths in different systems leading in many instances to the conclusion that this process may involve previously uncharacterized mechanisms for localized wall deposition in plants Since transfer cells play important roles in plant development and productivity the latter being relevant to crop yield especially so in major agricultural species such as wheat barley soybean and maize understanding the molecular and cellular events leading to wall ingrowth deposition holds exciting promise to develop new strategies to improve plant performance a key imperative in addressing global food security This Research Topic presents a timely and comprehensive treatise on transfer cell biology to help define critical questions for future research and thereby generating a deeper understanding of these fascinating and important cells in plant biology
