## Using the Neurobehavioral Cognitive Status Examination as a Screening Measure for Older Adults

Daniel L. Drane

*Medical College of Georgia, Augusta*

Sheryl S. Osato

*West Los Angeles VA Medical Center and UCLA School of Medicine*

*We evaluated the ability of the Neurobehavioral Cognitive Status Examination (NCSE) to accurately distinguish between healthy older adults and geriatric patients suffering from dementia. Although the NCSE correctly identified all dementia patients, it produced an unacceptably high rate of false positives among the healthy elderly (70%). Despite the NCSE's lack of specificity when using the recommended classification criteria, significant group differences were found on several individual subscales and on the total number of subscales passed. These findings suggest the need to further evaluate the appropriateness of the geriatric norms for the NCSE and highlight some of the unique considerations involved in the assessment of older adults. © 1997 National Academy of Neuropsychology*

Clinical neuropsychologists are poised to play a pivotal role in the care and treatment of the ever-increasing geriatric segment of the population through the process of ongoing cognitive assessment and functional evaluation. More than ever before, geriatric care facilities are regularly faced with the need to obtain neuropsychological evaluation of their residents for purposes that include differential diagnosis, placement, and an assessment of needs regarding nursing requirements and level of general care. The demand for sensitive cognitive screening measures that can be employed in an expedient, valid fashion is reinforced by the realization that the elderly are particularly susceptible to potentially reversible causes of cognitive impairment related to such etiologies as depression and a sensitivity to the effects of medication.

Several widely used screening instruments for use with older adults suffer from a lack of sensitivity and an inability to provide more than a dichotomous classification of patients as either cognitively impaired or non-impaired (Osato, Yang, & La Rue, 1993). The Neurobe-

**Pocket Guide and Toolkit to DeJong's Neurologic Examination** William W. Campbell, 2007-11-01. Designed as a diagnostic tool for non-neurologists or first-year neurology residents, this pocket guide contains the most essential information from the best-selling DeJong's *The Neurologic Examination*, Sixth Edition. Included are step-by-step instructions for each stage of the neurologic examination, numerous illustrations depicting examination techniques and frequently used tests and scales such as the Boston Naming Test, Glasgow Coma Scale, and Denver Scale of Communication Function. A toolkit at the back of the book contains lightweight adaptations of implements used in performing the examination, such as visual acuity charts, a red lens, a multi-pinhole, an optokinetic nystagmus tape, and other devices.

**Clinician's Guide To Neuropsychological Assessment** Rodney D. Vanderploeg, 2014-04-04. Neuropsychological assessment is a difficult and complicated process. Often, experienced clinicians as well as trainees and students gloss over fundamental problems or fail to consider potential sources of error. Since formal test data on the surface appear unambiguous and objective, they may fall into the habit of overemphasizing tests and their scores and underemphasizing all the factors that affect the validity, reliability, and interpretability of test data. But interpretation is far from straightforward, and a pragmatic application of assessment results requires attention to a multitude of issues. This long-awaited, updated, and greatly expanded second edition of the *Clinician's Guide to Neuropsychological Assessment*, like the first, focuses on the clinical practice of neuropsychology. Orienting readers to the entire multitude of issues, it guides them step-by-step through evaluation and helps them avoid common misconceptions, mistakes, and methodological pitfalls. It is divided into three sections: fundamental elements of the assessment process, special issues, settings, and populations, and new approaches and methodologies. The authors, all of whom are actively engaged in the clinical practice of neuropsychological assessment as well as in teaching and research, do an outstanding job of integrating the academic and the practical. The *Clinician's Guide to Neuropsychological Assessment*, Second Edition, will be welcomed as a text for graduate courses but also as an invaluable hands-on handbook for interns, postdoctoral fellows, and experienced neuropsychologists alike. No other book offers its combination of breadth across batteries and approaches, depth, and practicality.

**Handbook on the Neuropsychology of Aging and Dementia** Lisa D. Ravdin, Heather L. Katzen, 2019-02-14. This comprehensive update offers practical advice for professionals working in neuropsychology with older adults. Focusing on fundamentals, common issues, special considerations, and late-life cognitive disorders, respected names in this critical specialty address a wide range of presenting problems and assessment, diagnostic, and treatment concerns. Throughout, coverage pays keen attention to detail, bringing real-world nuance to large-scale concepts and breaking down complex processes into digestible steps. And like its predecessor, the new *Handbook* features recommendations for test batteries and ends each chapter by extracting its clinical pearls. A sampling of the topics covered

Assessment of depression and anxiety in older adults The assessment of change serial assessments in dementia evaluations Elder abuse identification in older adults Clinical assessment of postoperative cognitive decline Cognitive training and rehabilitation in aging and dementia Differentiating mild cognitive impairment and cognitive changes of normal aging Evaluating cognition in patients with chronic obstructive pulmonary disease This Second Edition of the Handbook on the Neuropsychology of Aging and Dementia offers a wealth of expert knowledge and hands on guidance for neuropsychologists gerontologists social workers and other clinicians interested in aging This can be a valuable reference for those studying for board certification in neuropsychology as well as a resource for veteran practitioners brushing up on key concepts in neuropsychology of age related disorders *The Health Psychology Handbook* Lee M. Cohen, Dennis E. McChargue, Frank L. Collins, 2003-06-18 It is sure to be an invaluable resource to scientist practitioners during the education and training process as well as to those continuing their professional development with this Handbook we have a great resource to facilitate what is ready for translation from research to practice now Our patients can benefit from these services now and we need a well trained health care workforce to meet these needs From the Foreword by Cynthia D Belar Ph D ABPP The Health Psychology Handbook Practical Issues for the Behavioral Medicine Specialist is a comprehensive yet practical volume that consolidates information needed by health psychologists working alongside other healthcare professionals It facilitates the progression of the learner from the classroom to the clinical setting by focusing on the translation of science to practice using concrete examples The Handbook is divided into four major parts Part I highlights practical issues faced by health psychologists in a medical setting how to motivate patients consultation liaison assessment and screening brief psychotherapies ethical issues etc Part II concentrates on treating unhealthy behaviors alcohol and nicotine use noncompliance overeating obesity physical inactivity stress Part III considers behavioral aspects of medical problems pain management hypertension diabetes cancer sexual dysfunction HIV AIDS irritable bowel syndrome insomnia And Part IV takes up special issues relevant to practice and research in the field minority issues women s issues working with geriatric populations public health approaches to health psychology and behavioral medicine Besides considering health problems the handbook also discusses professional issues such as Working with a multidisciplinary staff Conducting research Evaluating outcomes Practicing in public health settings The Handbook will prove an invaluable resource for those already working in the field of health psychology as well as for those in training The editors have developed an excellent sense of the needs of behavioral medicine practitioners I found myself quite enthusiastic about the ability of the editors to conceptualize the problems of the practitioner and the ways to address them in this volume The choice of authors is excellent William Lovallo University of Oklahoma VA Medical Center A handbook like this is a very valuable resource The clinical focus is what is special about the Handbook Lynn Kozlowski Pennsylvania State University *A Practical Guide to Geriatric Neuropsychology* Susan McPherson, Deborah Koltai, Deborah K. adult population taking a practical approach to treatment and intervention This book will be helpful for neuropsychologists interested in testing and providing recommendations for older adults and for psychologists interested in treating older adults

**An Assessment Guide To Geriatric Neuropsychology** Holly Tuokko, Thomas Hadjistavropoulos, 2014-04-04 At least half of all neuropsychological assessments are performed on elderly persons but the information clinicians need to make appropriate judgment calls is widely scattered Several books offering general descriptions of the cognitive functioning of the aged or of neuropsychological conditions affecting them are helpful to practitioners but do not provide reliable and valid normative information Two books that do provide this information do not focus on geriatric populations A concise yet comprehensive summary of what we now know about those over 65 with an extensive bibliography *An Assessment Guide to Geriatric Neuropsychology* fills the gap The neuropsychological assessment of elderly persons involves not only the performance based measurement of various capacities but heavy reliance on reports from caregivers both formal and informal about the day to day functioning of the affected person It also raises important yet often neglected ethical concerns The authors discuss all the measures that detect and discriminate among cognitive disorders of elderly persons including special measures relevant to caregiver reports and provide useful tables to assist in differential diagnosis They also reflect on the ethical issues that often confront the assessor of an elderly individual informed consent confidentiality the right of bodily autonomy and self determination and appropriate feedback This book will be an invaluable resource for all those called on to evaluate older clients

**Reliability and Validity in Neuropsychological Assessment** Michael D. Franzen, 2013-11-21 No other book reviews clinical neuropsychological assessment from an empirical psychometric perspective In this completely revised and updated 2nd edition the concepts and methods of psychometric neuropsychology are presented as a framework by which to evaluate current instruments Newer methodologies and statistical techniques are discussed such as meta analysis effect size confirming factor analysis and ecological validity The explosion of research in this area since the publication of the first edition in 1989 has been incorporated including a greatly expanded chapter on child assessment instruments This volume is a must for the bookshelf of every clinical neuropsychologist as well as researchers and students Anyone conducting forensic evaluations will especially find useful the information on reliability and validity when preparing for court appearances
