Rethinking Plastics in Product Design Geoff Isaac, 2025-03-06 This book

addresses the urgent need to reduce our use of virgin fossil plastics. It provides a framework for designers and manufacturers to re-evaluate their use of plastics and promotes the use of alternative materials with lower environmental impacts. Lightweight strong and cheap plastics are often the obvious choice when designing consumer durables but their use is resulting in devastating health and environmental consequences. Recycled plastics and bioplastics are often suitable replacements; however, mechanical and aesthetic differences mean working with these materials is often challenging and expensive. In this book, Geoff Isaac outlines strategies for developing more environmentally friendly design solutions and provides practical guidance for designers who seek to use plastics more sustainably. Chapters include case studies selected from sixty chairs made from renewable plastics as chairs are often developed to showcase the potential of new materials and their suitability for applications across other consumer products. The book also features interviews with a range of industry representatives and international designers including Philippe Starck, Barber Osgerby, Konstantin Grcic, Bertjan Pot and Karim Rashid to illustrate recent designs using renewable plastics. This book provides an empowering blueprint for designers to make environmentally responsible decisions in today's business landscape.

Digital Innovations for a Circular Plastic Economy in Africa Muiyiwa Oyinlola, Oluwaseun Kolade, 2023-05-31. Plastic pollution is one of the biggest challenges of the twenty-first century that requires innovative and varied solutions. Focusing on sub-Saharan Africa, this book brings together interdisciplinary, multi-sectoral and multi-stakeholder perspectives exploring challenges and opportunities for utilising digital innovations to manage and accelerate the transition to a circular plastic economy (CPE). This book is organised into three sections bringing together discussion of environmental conditions, operational dimensions and country case studies of digital transformation towards the circular plastic economy. It explores the environment for digitisation in the circular economy bringing together perspectives from practitioners in academia, innovation policy, civil society and government agencies. The book also highlights specific country case studies in relation to the development and implementation of different innovative ideas to drive the circular plastic economy across the three sub-Saharan African regions. Finally, the book interrogates the policy dimensions and practitioner perspectives towards a digitally enabled circular plastic economy. Written for a wide range of readers across academia, policy and practice including researchers, students, small and medium enterprises, SMEs, digital entrepreneurs, non-governmental organisations, NGOs and multilateral agencies, policymakers and public officials, this book offers unique insights into complex, multilayered issues relating to the production and management of plastic waste and highlights how digital innovations can drive the transition to the circular plastic economy in Africa.
