

Temperature versus heat

Name Isla knowles Class 7FG

The temperature of something tells us how hot it is in degrees Celsius ($^{\circ}\text{C}$). It does not tell us how much heat energy is in it.

The water in both beakers is at the same temperature but the water in the large beaker has 5 times as much heat energy in it.

?

1. Fill in the gaps in the sentences using words from the box below. You can use each word once, more than once, or not at all.

The amount of heat Energy in an object depends on Three things: its temperature, its mass, and the Material it is made from.

A tank full of hot water at 60°C contains More heat energy than a cup full of water at the same temperature because there is Less water in it.

A cup full of water at 50°C contains Lower heat energy than the same mass of water at 100°C because the water is at a Higher temperature.

energy higher less lower material more same three
