

Nuclear Fission and Fusion – Questions

Instructions: Identify the following descriptions as either **Fusion** or **Fission**.

- | | |
|--|----------------|
| 1) Requires at least two smaller atoms to occur. | <u>Fusion</u> |
| 2) The splitting of a large nucleus into smaller nuclei. | <u>Fission</u> |
| 3) Usually occurs with light elements. | <u>Fusion</u> |
| 4) Uranium-235 is struck by a neutron, releasing energy. | <u>Fission</u> |
| 5) Usually starts with a heavy element. | <u>Fission</u> |
| 6) Releases the most energy of the nuclear reactions. | <u>Fusion</u> |
| 7) Often leads to a chain reaction effect. | <u>Fission</u> |
| 8) Requires at least one heavy nucleus to start. | <u>Fission</u> |
| 9) The source of energy in stars like the Sun. | <u>Fusion</u> |
| 10) Used to generate energy in nuclear power plants. | <u>Fission</u> |

Prentice Hall Physical Science Concepts in Action helps students make the important connection between the science they read and what they experience every day Relevant content lively explorations and a wealth of hands on activities take students understanding of science beyond the page and into the world around them Now includes even more technology tools and activities to support differentiated instruction **Effects of Using a Layered Curriculum Format of Instruction in a High School Environmental Science Energy Unit** Anne Jeannette LaSovage,2006 Holt Science & Technology: Physical Science ,2004 *Energy, Ecology, and the Environment* Richard F. Wilson,2012-12-02 Energy Ecology and the Environment discusses how our need for energy and the different means required to obtain it affect the environment and the harnessing of different natural resources The book also aims to show more efficient ways to use and generate energy The book after a brief introduction to the concept of energy covers topics such as the different energy resources and the demands costs and policies regarding energy The book also discusses the problems brought about by the production of energy such as the hazards to nature and man environmental problems and pollution and accidents and sabotage that it can bring about Also tackled are issues such as the transport and disposal of wastes the conversion of energy and the regulation of the energy industry The text is recommended for naturalists who would like to know more about the effects of the energy industry on the environment as well as for energy scientists who are looking for alternative sources and ways to achieve clean energy *Holt Biology: Meiosis and sexual reproduction* ,2003 **Energy Futures** ,1986 **Science Spectrum** Holt Rinehart & Winston,Holt, Rinehart and Winston Staff,2003-03 *Earth Science* ,2001 *Government Reports Announcements & Index* ,1979 **Nuclear Fusion and Fission** Fiona Young-Brown,2016-07-15 Nuclear Fusion and Fission delves into nuclear physics and the scientists responsible for the discovery of splitting and fusing an atom The book begins with the very basic building blocks of science breaking down the different types of energy and how we use them the materials that make up an atom and our search for the perfect renewable energy source Set against the cultural backdrop of World War II later chapters follow each significant theory that led to the creation of the world s most dangerous weapon as well as some of its most widely used medical and food production processes today *What's the Difference Between Fission and Fusion?* | *Children's Physics of Energy* Baby Professor,2017-02-15 Although fission and fusion are both nuclear reactions they are miles apart in terms of definitions Fission splits while fusion combines You can use this child friendly book of physics to teach the principles of nuclear reactions in the simplest manner The carefully selected images will serve as additional guide to influence the visual effectiveness of this resource Get a copy today Fission and Fusion Lifeliqe,2019 This lesson plan covers nuclear fission and nuclear fusion **Fission, Fusion and the Energy Crisis** Stanley Ernest Hunt,1974 **Nuclear Fusion** Henry Rainsford Hulme,Antony McB. Fission: Proceedings of the International Conference International Workshop on Fusion Neutrons and Subcritical Nuclear Fission, 2012 **Cold Nuclear Fusion** Florian Ion Petrescu, 2012-07-01 Nuclear fusion is the process by which two or more atomic nuclei join together or fuse to form a single heavier nucleus During this process matter is not conserved because some of the mass of the fusing nuclei is converted to energy which is released The binding energy of the resulting nucleus is greater than the binding energy of each of the nuclei that fused to produce it Fusion is the process that powers active stars Creating the required conditions for fusion on Earth is very difficult to the point that it has not been accomplished at any scale for protium the common light isotope of hydrogen that undergoes natural fusion in stars In nuclear weapons some of the energy released by an atomic bomb fission bomb is used for compressing and heating a fusion fuel containing heavier isotopes of hydrogen and also sometimes lithium to the point of ignition At this point the energy released in the fusion reactions is enough to briefly maintain the reaction Fusion based nuclear power experiments attempt to create similar conditions using far lesser means although to date these experiments have failed to maintain conditions needed for ignition long enough for fusion to be a viable commercial power source There are many experiments examining the possibility of fusion power for electrical generation Nuclear fusion has great potential as a sustainable energy source This is due to the abundance of hydrogen on the planet and the inert nature of helium the nucleus which would result from the nuclear fusion of hydrogen atoms Unfortunately a controlled nuclear fusion reaction has not yet been achieved due to the temperatures required to sustain one In hot fusion it need a temperature of 4000 million degrees Without a minimum of 3000 million degrees we can t make the hot fusion reaction to obtain the nuclear power Today we have just 150 million degrees made To replace the lack of necessary temperature it uses various tricks Because obtaining the necessary huge temperature for hot fusion is still difficult it is time to focus us on cold nuclear fusion We need to bomb the fuel with accelerated deuterium nuclei The fuel will be made from heavy water and lithium The optimal proportion of lithium will be tested It would be preferable to keep fuel in the plasma state Research into developing controlled thermonuclear fusion for civil purposes also began in earnest in the 1950s and it continues to this day Two projects the National Ignition Facility and ITER are in the process of reaching breakeven after 60 years of design improvements developed from previous experiments The best results were obtained with the Tokamak type installations **Fission, Fusion and the Energy Crisis** S.
