Designed for recent graduates new analysts and professionals transitioning into healthcare analytics it offers practical guidance on tackling real world problems using statistical concepts and programming. The book is divided into three primary sections. The first section provides an introduction to healthcare data and measures. In these chapters readers will learn about the nuances of administrative claims and electronic health records as well as common industry measures related to quality and efficiency of care. The second section will cover foundational techniques such as hypothesis testing and regression analysis as well as more advanced approaches like generalized additive models and hierarchical models. In the last section readers will be introduced to epidemiological techniques such as direct and indirect standardization measures of disease frequency and association and time to event analysis. The book emphasizes interpretable methods that are both effective and easy to communicate to clinical and non technical stakeholders.
