

Generalized Landscape Regions of New York State

Overview:

Landscapes are classified as plains, plateaus, and mountains. New York State is one of the few states that has all three types. The development of a landscape is based primarily on the type of bedrock, climate factors, past and present geologic forces, and time. It takes tens of thousands or even millions of years for geologic forces to produce a landscape region. The Generalized Landscape Regions of NYS chart is often used with the Generalized Bedrock Geology of NYS and Geologic History of NYS charts to find related information. This might include arriving at the coordinates (latitude and longitude) of a landscape feature, or the type and age of bedrock and fossils found in specific landscape regions.

The relief of a landscape refers to the elevation differences found within the specific landscape. Mountainous landscapes normally will have the greatest relief, while plateaus usually exhibit medium relief and plains show very little change in relief. As one travels across NYS and is observant, it is easy to recognize a change in the landscape. This is especially true as one leaves the Atlantic Coastal Plain of Long Island and travels inland to various places within NYS.
