Trade in the Arabian Peninsula

Economic geography is the study of the distribution of economic activities such as agriculture, industry, and trade. Economic geographers study the specific goods and services that are produced in different areas of the world and how these goods and services are then traded and shared. One factor that determines patterns in economic geography is **human-environment interaction**, which is the interrelationship between people and their physical environment. Another factor is human movement from place to place, which affects patterns in trade and production.

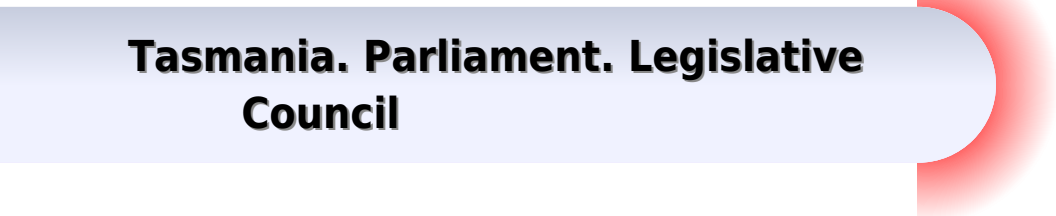

The harsh physical environment of the Arabian Peninsula profoundly shaped the region's harsh economic geography. The climate is arid, and water is scarce throughout much of the area. For thousands of years, people's movement across the desert was limited to regions where water was available. The domestication of the camel, however, enabled Arab peoples to develop wide trade networks across the Arabian Peninsula. The camel's adaptations to desert life, especially the ability to carry heavy loads and survive for many days without water, made it possible for Arab traders to carry their goods and supplies across many miles of desert. Several major caravan routes flourished in the time of Muhammad, and a few were in use until the nineteenth century. Trade across land bridges and through the Mediterranean and Arabian Seas, linking parts of Asia, Africa, and Europe had been active from very early times. Many of these routes are shown on the map.

Caption: The domestication of the camel, as well as traders' proximity to water, allowed trade routes to grow around the Arabian Peninsula.
