Towards the Third Millennium M. Gianella, G. Marucci, W. Quaglia, U. Gulini, 2000-05-31 Receptor Chemistry Towards the Third Millennium is the result of papers presented at the 12th Camerino Noordwijkerhout Symposium held in Camerino, Italy, in September 1999. Although much is known about the way ligands interact with receptors, which have now been isolated, characterized, and cloned, many aspects still remain to be explored. In particular, differentiation into distinct subpopulations and the multiplicity of transduction processes offer more specific targets in the search for new drugs. This book will be of interest to medicinal chemists, pharmacologists, biochemists, and neurologists, and will also be a valuable source of reference for medical students and postgraduate students in related fields. **Carboranes** Russell N. Grimes, 2011-05-06

Carboranes Second Edition is designed as a comprehensive source of information in a field that has experienced enormous growth in both its fundamental and applied aspects in the four decades since the publication of Carboranes 1970. During this long period, thousands of original research papers have appeared, along with many review articles and book chapters dealing with aspects of carborane chemistry. As carborane science has grown in complexity, and applications have advanced steadily in areas such as medicine, nanostructured and electroactive materials, catalysis, polymers, and others, the need for a monograph covering the entire area in a unified treatment has become increasingly apparent. This volume has two principal objectives: the first of which is to provide a readable and concise introduction to the basic principles underlying the synthesis, structures, reactivity, and applications of carboranes and metallocarboranes at a level suitable for readers in industry and academia who are not trained in boron chemistry but find themselves working with or lecturing about carboranes. Secondly, the book furnishes a trove of detailed information for workers active in carborane science and associated technologies. To that end, it incorporates tables listing thousands of specific compounds, keyed to literature references, together with more than 2,000 molecular structure drawings that illuminate the accompanying discussion. Thorough treatment of the synthesis, structures, and reactions of carboranes, heterocarboranes, and metallocarboranes in the first 13 chapters is followed by four chapters detailing advances in practical applications in polymer science, catalysis, medicine, and other areas. Includes over 2,000

molecular structure drawings throughout the text Features tables listing thousands of compounds with key literature references
