

UNIT SEVEN: INDUSTRIAL & ECONOMIC DEVELOPMENT PATTERNS & PROCESSES

1. The Industrial Revolution

Learning Target: Explain how the Industrial Revolution facilitated the growth and diffusion of industrialization.

Industrial Revolution: A period of rapid growth in the use of machines in manufacturing and production that began in the mid-1700s.

- Began in England with the invention of the steam engine and diffused out from the hearth
- Caused an increase in food production (as new technological advances occurred in farming) and caused more people moved to the cities
- Increased the gap wage between the poor and the wealthy
- Increases imperialism and colonialism because of need of raw materials (coal, lumber, cotton, etc)

2. Economic Sectors and Patterns

Learning Target: Explain the spatial patterns of industrial production and development.

Sector	Definition	Job Examples	T-shirt Company Example
Primary	Extraction of raw materials	Mining, fishing, lumber, agriculture, etc	Cotton Farmer
Secondary	Processing natural materials into finished goods	Manufacturing, construction, utilities, etc.	T-shirt manufacturer company
Tertiary	Offering services to consumers	Retail, tourism, entertainment, etc	T-shirt Store
Quaternary	Research and administration involved often associated with technological innovation	finance, insurance, marketing, and wholesaling.	Researcher on how to make t-shirts stainless
Quinary	The highest levels of decision-making in a society or economy	CEO, school superintendent, etc	CEO of the T-shirt Company

Site Factors: industrial location factors related to the costs of the factors of production inside the factory/hay

- Capital - funds to establish new factories or expand existing ones. Most important site factor in certain industries (high-tech). More difficult for developing countries to gain access to capital
- Labor - most important site factor globally

Labor-intensive industries: wages and other compensation paid to employees constitute a high percentage of expenses

Break-of-Bulk Point: A location where transfer is possible from one mode of transportation to another (cargo ship to train)

Agglomeration: the process by which a certain region becomes known for producing a certain product. Examples of this include Los Angeles for movies, Houston for energy, or Silicon Valley for computer technology.

Weber's Least Cost Theory: Minimize three categories of costs to increase profits: Transportation (weight and distance), Labor (cheap labor), and Agglomeration

- **Bulk-Gaining** - makes something that gains volume or weight during production. To minimize transportation costs, they focus on proximity to markets.
- **Bulk-Reducing** - Makes something that loses volume or weight during production. To minimize transportation costs, they focus on proximity to inputs
- **Agglomeration:** clustering of productive activities and people for mutual advantage (example: mall)

1. labor, transportation (including shipping containers), the break-of-bulk point, least cost theory, markets, and resources influence the location of manufacturing such as core, semi periphery, and periphery locations.
