✓ Exclusively available on IvyPanda

Scholars have studied the complex relationship between humans and nature for centuries. This relationship constantly evolves as the understanding of humans and nature changes. The relationship between humans and nature is difficult because people are both parts of nature and separate from it. The relationship with nature is a complex one because people are constantly trying to find a balance between their needs to use and conserve natural resources. In William Cronon's view, the relationship between humans and nature is complex (Peterson 2022). People depend on nature for survival, but they also impact nature in various ways. On the one hand, humans rely on nature for their survival, and on the other hand, they often seek to dominate and control it. This tension between dependence and control has led to several environmental problems, as humans have attempted to manipulate nature to suit their own needs without regard for the long-term consequences.

The idea of wilderness is more than just a physical place; it is an idea that has been created and shaped by human beings. William Cronon's essay seeks to challenge the romanticized view of wilderness that has developed in American culture (Peterson 2022). Wilderness is not something that exists independently from humans; instead, it exists concerning humans (Peterson 2022). This view of wilderness challenges the traditional understanding of nature as separate from and opposed to human society.

Another illustration is how Europeans viewed nature when they first arrived in North America. According to Cronon, they saw the land as an untamed wilderness that needed to be tamed and domesticated (Peterson 2022). To do this, they brought over plants and animals from Europe that they were familiar with. They also started clearing land for farming and ranching that expanded their cultivation activities. This attitude of domination continued as the United States expanded westward (Cutler 2018). As the frontier disappeared and the country became more settled, some people started to see nature in a different light. They began to appreciate the beauty of the wilderness and the peace it could bring. This led to the development of the national parks system. People began to see nature as something to be preserved, not conquered (Peterson 2022). Cronon argues that the way people view nature is constantly changing (Peterson 2022).
