Observing Human Traits Lab

Background: Physical traits are observable characteristics that are determined by genes. Genes are specific segments of DNA located on chromosomes that code for a particular trait. Most genes have two or more variations called alleles. Some alleles are dominant over others and dominant alleles will be expressed (an organism's phenotype or physical appearance) over recessive alleles. Recessive alleles may be present in an organism but expression is masked in the presence of a dominant allele for the same gene. Recessive traits are only expressed when there are two recessive alleles present in the genotype (DNA code).

Keep in mind that it's not always quite this simple. There are other factors that influence expression, and most traits have several genes that influence them. This is an introduction to dominant and recessive traits. Let's get started!

Directions: Circle the phenotype you have for each of the following traits.

Resources in Education, 1994 **Beyond Human Nature** Jesse J. Prinz, 2015-11-09 A loud counterblast to the fashionable faith of our times that human nature is driven by biology urgent and persuasive Sunday Times London In this era of genome projects and brain scans it is all too easy to overestimate the role of biology in human psychology But in this passionate corrective to the idea that DNA is destiny Jesse Prinz focuses on the most extraordinary aspect of human nature that nurture can supplement and supplant nature allowing our minds to be profoundly influenced by experience and culture Drawing on cutting edge research in neuroscience psychology and anthropology Prinz shatters the myth of human uniformity and reveals how our differing cultures and life experiences make each of us unique Along the way he shows that we can t blame mental illness or addiction on our genes and that societal factors shape gender differences in cognitive ability and sexual behavior A much needed contribution to the nature nurture debate Beyond Human Nature shows us that it is only

through the lens of nurture that the spectrum of human diversity becomes fully and brilliantly visible RAPACITY 2120

An Ape Ethic and the Question of Personhood Gregory F. Tague, 2020-03-05 Gregory F Tague s An Ape Ethic and the Question of Personhood argues that great apes are moral individuals because they engage in a land ethic as ecosystem engineers to generate ecologically sustainable biomes for themselves and other species Tague shows that we need to recognize apes as eco engineers in order to save them and their habitats and that in so doing we will ultimately save earth s biosphere The book draws on extensive empirical research from the ecology and behavior of great apes and synthesizes past and current understanding of the similarities in cognition social behavior and culture found in apes Importantly this book proposes that differences between humans and apes provide the foundation for the call to recognize forest personhood in the great apes While all ape species are alike in terms of cognition intelligence and behaviors there is a vital contrast unlike humans great apes are efficient ecological engineers Therefore simian forest sovereignty is critical to conservation efforts in controlling global warming and apes should be granted dominion over their tropical forests Weaving together philosophy biology socioecology and elements from eco psychology this book provides a glimmer of hope for future acknowledgment of the inherent ethic that ape species embody in their eco centered existence on this planet
