**Biomedical Index to PHS-supported Research**, 1993 Reducing the Impacts of Development on Wildlife James Gleeson, Deborah Gleeson, 2012 The rapidly increasing number of threatened flora and fauna species worldwide is one of the chief problems confronting environmental professionals today This problem is largely due to the impact humans have had on land use through development e g agricultural residential industrial infrastructure and mining developments The requirement for developers to implement measures to reduce the impacts of development on wildlife is underpinned by government legislation A variety of measures or strategies are available to reduce such impacts including those to reduce impacts on flora and fauna New Paradigms in Ergonomics Neville A. Stanton, Paul M. Salmon, Guy Walker, 2020-04-28 The

systems in which we work continue to evolve creating emergent problems and often strengthening intractable issues In order to remain relevant and impactful the discipline of ergonomics needs its paradigms to evolve too The aim of this book is to provide researchers and practitioners with new paradigms in the form of ideas concepts theories methods practices and values The chapters take the reader on a journey through underlying theories new ways to apply those theories and emerging domains in which ergonomics is expected to play a greater role Readers of this book will be inspired by these new paradigms in ergonomics and seek to push the boundaries even further The lifeblood of the science depends on continual evolution and developments to take on the challenges we face in complex sociotechnical systems design and evaluation Perhaps the most significant take home message from this book is the demonstration of how theory maps onto practice As such the only remaining paradigm shift is for these ideas concepts methods and practices to be taken up more widely and the discipline advanced until the next paradigm shift occurs The chapters were originally published as a special issue in the journal *Ergonomics*
