Temperature – increased temperature speeds up the molecules of the solvent, allowing more solvent to come into contact with the solute.

Stirring or mixing – mechanically mixing the solvent and solute allows more solvent to come into contact with the solute.

An acid and a base can be combined in what is known as a neutralization reaction. In this reaction, the pH will become something between the pH's of the acid and the base. When they are combined, the products are water (from the  $\text{H}^+$  and  $\text{OH}^-$  ions) and an ionic compound known as a salt.

Name 3 characteristics that acids and bases share.

electrolytes (can conduct electricity)

Both can also be described as having unique tastes and capable of changing the color of indicators.
