

## Standard 4 Review Sheet / Key Idea 2

## Living Environment

The living things in an area interacting with their physical environment make up an ecosystem.

Organisms which can make their own food by photosynthesis are called autotrophs or producers.

primary consumers are herbivores which eat producers.

secondary consumers are consumers which eat primary consumers.

autotrophs -- organisms able to make its own food (usually using the life process of photosynthesis)

heterotrophs -- is an organism which depends upon other organisms for its food

habitat -- is the place an organism lives

niche -- is the role of an organism in the environment, especially its feeding role.

\*\* No 2 species can occupy the same ecological niche.

As the number of organisms in an ecosystem and their interactions increase, the stability of the ecosystem increases.

Organize the four ecological levels of organization from simplest to most complex.

population (one species) → community (more than one species in an area) → ecosystem (community plus physical factors) → biosphere (all parts of world where life is found)

### Life Processes

digestion -- breakdown of food to simpler molecules which can enter the cells

circulation -- the movement of materials within an organism or its cells

movement -- (locomotion) change in position by a living thing

excretion -- removal of waste products by an organism (wastes may include carbon-dioxide, water, and urea in urine and sweat)
