Planning, Management and Ideology Colin Marsh, 1997 **Key Concepts for Understanding Curriculum** Colin J. Marsh, 1997 **Introduction to Education Studies** Steve Bartlett, Diana Burton, 2007-05-16

Introduction to Education Studies is established as the key text for undergraduate students of education studies as well as for practitioners embarking on a higher degree. The book provides a thorough grounding for students new to the subject without assuming a substantial prior knowledge of the area. It also takes a multidisciplinary approach to the study of education drawing on the authors' extensive experience of teaching and course development at both undergraduate and postgraduate level. This updated edition includes new sections on the nature and purposes of education research in education ideologies and the curriculum, lifelong learning, comparative education, social and psychological explanations for pupil/student achievement, policy developments in education. This highly popular, accessibly written text is essential reading for students on education studies courses. The authors have provided an important resource for student study in education. Importantly, it reinforces the necessity of a multidisciplinary approach to the understanding of contested educational process and practices in a contemporary context. Dave Trotman Escalante **Reforming Teaching and Teacher Education** Eija Kimonen, Raimo Nevalainen, 2017-03-21

What are the prerequisites for reforming education and how can these reforms be seen in school development and culture? How should teacher education support this reform process? What are the principles and practices underlying the functioning of the schools of tomorrow? These questions are examined in this unique volume. The authors in this book argue that the central function of teacher education and education in general is to respond to the challenges brought on by the twenty-first century. According to this approach, the competencies and skills needed in the future are not merely a new addition to school activities but rather something requiring a comprehensive reform of school culture encompassing teacher education, curricula and teaching methods. Such a fundamental process of change in the action and thinking models used by schools would be an effort to achieve a complete transformation, the result of which would be schools developing into organizations that are both creative and imbued with a strong sense of community. A central attribute is that the creation of new knowledge is not just restricted to the classroom but also takes place in out-of-school environments. This would link learning to its natural context, eventually leading to an ideal instruction that is actively problem-oriented, holistic and life-centered. This reform-minded volume is divided into three parts. The first part focuses on the reform processes in teacher education, the second on the reforms of pedagogics at schools and teacher education institutions, and the third on the processes of
