

KFDJ & KFDS-FS Diverters

Managing fluid below the rotary

500/1000/2000 psi Diverter Systems

The industry standard for offshore drilling & production for over 50 years

Product description

- HMH diverter systems lead the offshore drilling market, providing field-proven protection from shallow gas blowouts while minimizing equipment handling time and enabling longer up-time. In the event of a shallow gas kick, the diverter is energized to seal around the drill pipe and divert the gas safely overboard.
- A diverter system is often used during top-hole drilling and is primarily used for the potentially hazardous flows that can be experienced prior to setting the casing string on which the BOP stack and choke manifold will be installed.
- The diverter system is not intended to shut-in or halt well flow, rather it provides a low-pressure flow control system to direct controlled or uncontrolled wellbore fluids away from the immediate drilling area for the safety of personnel and equipment.
- The HMH KFDJ and KFDS-FS diverter systems are used on a variety of land and offshore rig types to protect against shallow gas kicks during drilling operations.
- HMH KFDJ diverters include a full range of insert packer sizes, all of which use a "J" type running tool.
- The HMH KFDS-FS diverter system utilizes a conventional annular-style packing element.
- HMH is a single-source supplier for complete diverter solutions, including diverter assembly, controls, valves, spools, and overshot packers. An integrated package, engineered to specific requirements will provide maximum safety, efficiency and savings.
